Contents

Part I  Advanced Instrumentation, Techniques and Methods

1 Material Characterization by Fast Scanning Calorimetry: Practice and Applications ......................................................... 3
   Jürgen E.K. Schawe and Stefan Pogatscher

2 Non-Adiabatic Scanning Calorimeter for Controlled Fast Cooling and Heating ......................................................... 81
   Evgeny Zhuravlev and Christoph Schick

3 Quasi-adiabatic, Membrane-Based, Highly Sensitive Fast Scanning Nanocalorimetry ....................................................... 105
   J. Rodríguez-Viejo and A.F. Lopeandía

4 Fast Scanning Calorimetry–Fast Thermal Desorption Technique: The Thin Wire Approach ........................................... 151
   Deepanjan Bhattacharya, Ulyana Cubeta, and Vladislav Sadtchenko

5 Fast Scanning Calorimetry of Silk Fibroin Protein: Sample Mass and Specific Heat Capacity Determination .............. 187
   Peggy Cebe, Benjamin P. Partlow, David L. Kaplan, Andreas Wurm, Evgeny Zhuravlev, and Christoph Schick

6 Scanning AC Nanocalorimetry and Its Applications .......................................................... 205
   Kechao Xiao and Joost J. Vlassak

7 Isoconversional Kinetics by Fast Scanning Calorimetry .......................................................... 237
   Nicolas Sbirrazzuoli, Nathanael Guigo, and Sergey Vyazovkin

8 Reliable Absolute Vapor Pressures of Extremely Low Volatile Compounds from Fast Scanning Calorimetry .............. 259
   Mathias Ahrenberg, Alexandr Ostonen, Jürn W.P. Schmelzer, Martin Beck, Christin Schmidt, Olaf Kessler, Udo Kragl,
   Sergey P. Verevkin, and Christoph Schick
Part II  Combination with Analytical Techniques and Molecular Simulations

9 Design of an In Situ Setup Combining Nanocalorimetry and Nano- or Micro-focus X-Ray Scattering to Address Fast Structure Formation Processes ........................................ 299

10 Combining Fast Scanning Chip Calorimetry with Structural and Morphological Characterization Techniques ........................................ 327
Dorien Baeten, Dario Cavallo, Giuseppe Portale, René Androsch, Vincent Mathot, and Bart Goderis

11 Integration of Fast Scanning Calorimetry (FSC) with Microstructural Analysis Techniques ........................................ 361
Jing Jiang, Lai Wei, and Dongshan Zhou

12 Combining Fast-Scan Chip Calorimetry with Molecular Simulations to Investigate Polymer Crystal Melting ........................................ 379
Xiaoming Jiang, Zhaolei Li, Huanhuan Gao, and Wenbing Hu

Part III  Dynamics of (de)Vitrification

13 Cooling Rate Dependent Glass Transition in Thin Polymer Films and in Bulk ........................................ 403
Daniele Cangialosi, Angel Alejandro, and Juan Colmenero

14 The Glass Transition and Structural Recovery Using Flash DSC ........................................ 433
Sindee L. Simon and Yung P. Koh

Part IV  Metastability and Reorganization in Relation to Crystallization and Melting

15 New Insights into Polymer Crystallization by Fast Scanning Chip Calorimetry ........................................ 463
Christoph Schick and René Androsch

16 Mesophase Formation in Isotactic Polypropylene Copolymers ........................................ 537
Ernesto Pérez, Alberto García-Peñas, Javier Arranz-Andrés, José M. Gómez-Elvira, and María L. Cerrada

17 Industrial Applications of Fast Scanning DSC: New Opportunities for Studying Polyolefin Crystallization ........................................ 561
Daniel Istrate, Ralf Kleppinger, and Klaas Remerie
18 Full-Temperature-Range Crystallization Rates of Polyamides by Fast Scanning Calorimetry as Key to Processing ............... 611
Geert Vanden Poel, Daniel Istrate, and Vincent Mathot

19 Kinetic Studies of Melting, Crystallization, and Glass Formation ................................................................. 633
John H. Perepezko and Jun-Qiang Wang

20 Nucleation Kinetics Analyses of Deeply Undercooled Metallic Liquids by Fast Scanning Calorimetry ......................... 661
Christian Simon, Yikun Zhang, and Gerhard Wilde

21 Fast Scanning Calorimetry of Phase Transitions in Metals ...... 691
Yulai Gao, Bingge Zhao, Bin Yang, and Christoph Schick

22 Precipitation and Dissolution Kinetics in Metallic Alloys with Focus on Aluminium Alloys by Calorimetry in a Wide Scanning Rate Range ......................................................... 723
Benjamin Milkereit, Olaf Kessler, and Christoph Schick

23 Martensitic Transformation of NiMnGa Shape Memory Alloys Thin Films Studied by Flash DSC .......................... 775
J.M. Barandiaran, I.R. Aseguinolaza, A. Mota-Cobián, and V.A. Chernenko

Index ................................................................................................................................................. 787
