

# Membrane Materials for Gas and Vapor Separation

Synthesis and Application of Silicon-Containing Polymers

*Edited by*

*Yuri Yampolskii and Eugene Finkelshtein*

*A.V. Topchiev Institute of Petrochemical Synthesis, RAS, Moscow, Russia*

**WILEY**

## Contents

**Contributors** *xi*

**Preface** *xv*

- 1 Permeability of Polymers** *1*  
*Yuri Yampolskii*
- 1.1 Introduction *1*
- 1.2 Detailed mechanism of sorption and transport *3*
- 1.2.1 Transition-state model *3*
- 1.2.2 Free volume model *4*
- 1.2.3 Sorption isotherms *5*
- 1.3 Concentration dependence of permeability and diffusion coefficients *6*
- 1.4 Effects of properties of gases and polymers on permeation parameters *10*
- Acknowledgement *13*
- References *13*
- 2 Organosiloxanes (Silicones), Polyorganosiloxane Block Copolymers: Synthesis, Properties, and Gas Permeation Membranes Based on Them** *17*  
*Igor Raygorodsky, Victor Kopylov, and Alexander Kovyazin*
- 2.1 Introduction *17*
- 2.2 Synthesis and transformations of organosiloxanes *17*
- 2.2.1 Polyorganosiloxanes with aminoalkyl groups at silicon *19*
- 2.2.2 Organosilicon alcohols and phenols *21*
- 2.3 Synthesis of polyorganosiloxane block copolymers *23*
- 2.3.1 Polyester(ether)–polyorganosiloxane block copolymers *24*
- 2.3.2 Synthesis of polyurethane–, polyurea–, polyamide–, polyimide–organosiloxane POBCs *25*
- 2.4 Properties of polyorganosiloxane block copolymers *29*
- 2.4.1 Phase state of polyblock organosiloxane copolymers *29*
- 2.5 Morphology of POBCs and its effects on their diffusion properties *30*
- 2.5.1 Types of heterogeneous structure *30*
- 2.6 Some representatives of POBC as membrane materials and their properties *32*
- 2.6.1 Polycarbonate–polysiloxanes *32*
- 2.6.2 Polyurethane(urea)–polysiloxanes *39*

2.6.3	Polyimide(amide)–polysiloxanes	42
2.7	Conclusions	45

## 8 Gas and Vapor Transport Properties of Si-Containing and Related Polymers 271

*Yuri Yampolskii*

- 8.1 Introduction 271
- 8.2 Rubbery Si-containing polymers 272
  - 8.2.1 Polysiloxanes 272
  - 8.2.2 Siloxane-containing copolymers (block copolymers, random copolymers and graft copolymers) 274
  - 8.2.3 Polysilmethylenes 277
- 8.3 Glassy Si-containing polymers 278
  - 8.3.1 Polymers with Si–O–Si bonds in side chains 278
  - 8.3.2 Poly(vinyltrimethyl silane) and related vinylic polymers 282
  - 8.3.3 Metathesis norbornene polymers 285
  - 8.3.4 Additive norbornene polymers 286
  - 8.3.5 Polyacetylenes 290
- 8.3.6 Other glassy Si-containing polymers 293
- 8.4 Free volume in Si-containing polymers 294
- 8.5 Concluding remarks 296
- Acknowledgement 298
- References 298

## 9 Modeling of Si-Containing Polymers 307

*Joel R. Fried, Timothy Dubbs, and Morteza Azizi*

- 9.1 Introduction 307
- 9.2 Main-chain silicon-containing polymers 309
  - 9.2.1 Polysiloxanes 309
  - 9.2.2 Polysilanes and silalkylene polymers 314
- 9.3 Side-chain silicon-containing polymers 316
  - 9.3.1 Poly(vinyltrimethylsilane) 316
  - 9.3.2 Poly[1-(trimethylsilyl)-1-propyne] 317
    - 9.3.2.1 Conformational studies 318
    - 9.3.2.2 Simulation of gas transport 319
- 9.4 Conclusions 324
- Appendices 325
- 9.A Molecular flexibility 325
- 9.B Simulation of diffusivity 325
  - 9.B.1 Einstein relationship 325
  - 9.B.2 VACF method 325
- 9.C Simulation of solubility: Widom method 325
- 9.D Molecular mechanics force fields 326
  - 9.D.1 DREIDING 326
  - 9.D.2 Polymer-consistent force field (pcff) 326
  - 9.D.3 GROMOS 326
  - 9.D.4 COMPASS 326
- References 327

- 10 Pervaporation and Evapomeation with Si-Containing Polymers 335**  
*Tadashi Uragami*
- 10.1 Introduction 335
  - 10.2 Structural design of Si-containing polymer membranes 335
    - 10.2.1 Chemical design of Si-containing polymer membrane materials 336
    - 10.2.2 Physical construction of Si-containing polymer membranes 336
  - 10.3 Pervaporation 337
    - 10.3.1 Principle of pervaporation 337
    - 10.3.2 Fundamentals of pervaporation 338
    - 10.3.3 Solution–diffusion model in pervaporation 339
  - 10.4 Evapomeation 340
    - 10.4.1 Principle of evapomeation 340
    - 10.4.2 Principle of temperature-difference controlled evapomeation 341
  - 10.5 Technology of pervaporation with Si-containing polymer membranes 342
    - 10.5.1 Alcohol permselective membranes 342
    - 10.5.2 Hydrocarbon permselective membranes 353
      - 10.5.2.1 Aromatic hydrocarbon removal 353
      - 10.5.2.2 Chlorinated hydrocarbon removal 358
    - 10.5.3 Organic permselective membranes 360
    - 10.5.4 Membranes for separation of organic–organic mixtures 361
    - 10.5.5 Membranes for optical resolution 362
  - 10.6 Technology of evapomeation with Si-containing polymer membranes 363
    - 10.6.1 Permeation and separation by evapomeation 363
    - 10.6.2 Concentration of ethanol by temperature-difference controlled evapomeation 364
  - 10.7 Conclusions 365
  - References 365
- 11 Si-Containing Polymers in Membrane Gas Separation 373**  
*Adele Brunetti, Leonardo Melone, Enrico Drioli, and Giuseppe Barbieri*
- Executive summary 373
  - 11.1 Introduction 373
  - 11.2 Si-containing polymer membranes used in gas separation 375
    - 11.2.1 Silicon rubber membrane materials 375
    - 11.2.2 Polyacetylene membrane materials 376
    - 11.2.3 Polynorbornene membrane materials 378
    - 11.2.4 Other Si-containing membrane materials 378
  - 11.3 Separations 379
  - 11.4 Membrane modules 381
  - 11.5 Competing technologies for separation of gases 384
  - 11.6 Applications 385
    - 11.6.1 Air separation 385
    - 11.6.2 Hydrogen separation 386
    - 11.6.3 Hydrocarbon separation 390
    - 11.6.4 VOC separation 392
  - References 393
