

# Engineering Thermodynamics with Worked Examples

Second Edition

**Nihal E Wijesundera**

 **World Scientific**

NEW JERSEY • LONDON • SINGAPORE • BEIJING • SHANGHAI • HONG KONG • TAIPEI • CHENNAI • TOKYO

# Contents

Preface	v
<b>Chapter 1</b>	
<b>Thermodynamic Systems and Properties</b>	<b>1</b>
1.1 Thermodynamics	1
1.2 Systems and Surroundings	1
1.2.1 Closed-system or control-mass	2
1.2.2 Open-system or control-volume	2
1.2.3 Isolated system	2
1.3 Properties of a System	2
1.3.1 Intensive properties	3
1.3.2 Extensive properties	3
1.4 State of a System	3
1.5 Some Basic Properties of Systems	3
1.5.1 Pressure	3
1.5.2 Temperature	5
1.5.3 Temperature scales	7
1.5.4 Density and specific volume	9
1.6 Macroscopic and Microscopic View Points	9
1.7 Thermodynamic Equilibrium	10
1.7.1 Quasi-equilibrium and non-equilibrium processes	10
1.8 Temperature Measurement and the Zeroth-Law	13
1.8.1 The Zeroth-law of thermodynamics	14
1.9 Worked Examples	14
Problems	38
References	41

**Chapter 2**

<b>Properties of a Pure Substance</b>	<b>43</b>
2.1 The Pure Substance	43
2.2 Phase Equilibrium in a Pure Substance	44
2.3 Phase Diagrams	46
2.4 Independent Properties	49
2.5 Tables and Charts of Property Data: Equation of State	49
2.6 Ideal-Gas Equation of State	51
2.7 Microscopic View Point	52
2.8 Gas Laws	53
2.9 Van der Waals Equation of State	53
2.10 Worked Examples	54
Problems	83
References	85

**Chapter 3**

<b>Work and Heat Interactions</b>	<b>87</b>
3.1 Concept of Work in Mechanics	87
3.2 Work Interactions in Thermodynamics	89
3.2.1 Criterion for a work interaction	89
3.3 Work Done at a Moving Boundary	90
3.3.1 Pressure-volume diagram	92
3.3.2 Path dependence of work done	93
3.4 Work Done in Extending a Solid Rod	94
3.5 Work Done in Stretching a Liquid Surface	94
3.6 Systems Involving Electrical Work	95
3.7 Systems Involving Magnetic Work	96
3.8 Heat Interactions	96
3.9 Comparison of Heat and Work	97
3.10 Worked Examples	97
Problems	125
References	128

**Chapter 4**

<b>The First Law of Thermodynamics</b>	<b>129</b>
4.1 First Law for a Cyclic Process	129

4.2	First Law for a Change of State	131
4.2.1	An uncoupled-system	133
4.2.2	A coupled-system	135
4.3	Internal Energy – A Thermodynamic Property	136
4.4	State Postulate	138
4.5	Internal Energy and Heat Capacities	138
4.5.1	Heat capacity at constant volume	139
4.5.2	Enthalpy	140
4.5.3	Heat capacity at constant pressure	140
4.6	Properties of Ideal Gases	141
4.6.1	Internal energy, enthalpy and heat capacities of an ideal gas	142
4.6.2	Heat capacities and kinetic theory	143
4.7	Temperature Dependence of Heat Capacity	146
4.8	Internal Energy and Enthalpy of a Pure Substance	146
4.9	Worked Examples	148
	Problems	185
	References	189

## Chapter 5

<b>First Law Analysis of Open Systems</b>	<b>190</b>	
5.1	Open Systems: An Example	190
5.2	General Form of the First Law for Control Volumes	191
5.3	Mass Conservation Law for Control Volumes	195
5.4	Steady-Flow Energy Equation (SFEE)	196
5.5	Fluid Mass Flow Rate in a Duct	197
5.6	Some Steady-Flow Devices	197
5.6.1	Nozzles and diffusers	198
5.6.2	Turbines and compressors	199
5.6.3	Mixing chambers and heat exchangers	200
5.7	Analysis of a Transient Filling Process	202
5.8	Worked Examples	204
	Problems	238
	References	240

**Chapter 6**

<b>The Second Law of Thermodynamics</b>	<b>241</b>
6.1 The Heat Engine Cycle	241
6.1.1 Efficiency of a heat engine cycle	245
6.2 The Reversed Heat Engine Cycle	245
6.2.1 Coefficient of performance of a reversed heat engine cycle	247
6.3 The Second Law of Thermodynamics	249
6.3.1 Equivalence of the Kelvin-Planck and Clausius statements	250
6.4 Reversible and Irreversible Processes	251
6.4.1 Types of irreversible processes	254
6.4.2 Reversible heat engines and thermal reservoirs	255
6.5 Some Consequences of the Second Law	255
6.5.1 Efficiency of a Carnot cycle using an ideal gas	258
6.5.2 Thermodynamic temperature scale	260
6.5.3 Cycles interacting with a single thermal reservoir	263
6.5.4 Cycles interacting with two thermal reservoirs	265
6.5.5 Cycles interacting with any number of thermal reservoirs	266
6.6 Worked Examples	269
Problems	297
References	300

**Chapter 7**

<b>Entropy</b>	<b>301</b>
7.1 The Clausius Inequality and Entropy	301
7.1.1 Entropy – A thermodynamic property	302
7.1.2 The temperature-entropy diagram	304
7.1.3 The ‘T-ds’ equation	306
7.1.4 Entropy of an ideal gas	306
7.1.5 Entropy of a pure thermal system	307
7.1.6 Entropy of a pure substance	308
7.2 Principle of Increase of Entropy	309
7.2.1 Storage, production and transfer of entropy	311
7.2.2 Entropy transfer in a heat engine	314

7.2.3	Entropy transfer in steady heat conduction	316
7.3	Limitations Imposed on Work Output by the Second Law	317
7.3.1	Helmholtz and Gibbs free energy	318
7.3.2	Availability	320
7.4	Maximum Work, Irreversibility and Entropy Production	322
7.5	Entropy, Irreversibility and Natural Processes	324
7.6	Worked Examples	326
	Problems	358
	References	362

## Chapter 8

<b>Second Law Analysis of Open Systems</b>	<b>363</b>	
8.1	The Entropy Balance Equation	363
8.2	The Combined First and Second Laws	367
8.2.1	Availability or exergy	371
8.2.2	First law and second law efficiency	373
8.3	Worked Examples	374
	Problems	408
	References	410

## Chapter 9

<b>Vapor Power Cycles</b>	<b>411</b>	
9.1	The Carnot Cycle Using a Vapor	411
9.2	The Rankine Cycle	413
9.2.1	Temperature-entropy and enthalpy-entropy diagrams	415
9.2.2	Analysis of the Rankine cycle	417
9.3	The Reheat Cycle	418
9.3.1	Analysis of the reheat cycle	420
9.4	The Regenerative Power Cycle	421
9.4.1	Analysis of the regenerative cycle with open-feed-heaters	423
9.4.2	Closed-feed-heaters	424
9.5	The Choice of Working Fluid	425
9.5.1	Binary vapor cycle	426
9.5.2	Analysis of the binary vapor cycle	427

9.5.3	Supercritical vapor power cycle	428
9.6	Combined-Heat and Power (CHP) Cycles	429
9.7	Deviations Between Actual and Ideal Cycles	430
9.8	Simplified Second Law Analysis of Power Cycles	432
9.9	Worked Examples	434
	Problems	471
	References	475
<b>Chapter 10</b>		
<b>Gas Power Cycles</b>		<b>476</b>
10.1	Internal-Combustion Engine Cycles	476
10.1.1	Spark-ignition (SI) engines	476
10.1.2	Compression-ignition (CI) engines	478
10.2	Air Standard Cycles	479
10.2.1	Analysis of the Otto cycle	480
10.2.2	Analysis of the Diesel cycle	482
10.2.3	The dual cycle	484
10.3	Gas Turbine Engine Cycles	485
10.3.1	Analysis of the Brayton cycle	486
10.3.2	Gas turbine cycle with regeneration	489
10.3.3	Analysis of the ideal regenerative cycle	491
10.4	Gas Turbine Cycles with Intercooling and Reheating	492
10.4.1	Staged-compression with intercooling	493
10.4.2	Multi-staged expansion with reheating	495
10.4.3	The Ericsson cycle	496
10.5	Air-Standard Cycle for Jet Propulsion	497
10.6	Idealizations in Air-Standard Cycles	498
10.7	Worked Examples	500
	Problems	526
	References	529
<b>Chapter 11</b>		
<b>Refrigeration Cycles</b>		<b>530</b>
11.1	The Reversed-Carnot Cycle Using a Vapor	530
11.2	The Vapor Compression Cycle	533

11.2.1	Analysis of the vapor compression cycle	536
11.2.2	Actual vapor compression cycle	537
11.3	Modifications to the Vapor Compression Cycle	539
11.3.1	Two-stage compression with flash inter-cooling	539
11.3.2	Two-stage compression with two evaporators	540
11.4	Refrigerants for Vapor Compression Systems	541
11.5	The Vapor Absorption Cycle	543
11.5.1	The three-heat-reservoir-model	544
11.5.2	Analysis of the actual absorption cycle	545
11.5.3	Equilibrium of water-LiBr mixtures	546
11.6	The Air-Standard Refrigeration Cycle	547
11.6.1	The air-standard refrigeration cycle with a heat exchanger	548
11.7	Worked Examples	549
	Problems	573
	References	576

## Chapter 12

### Gas and Gas-Vapor Mixtures **577**

12.1	Mixtures of Gases	577
12.1.1	Mass-fraction and mole-fraction	578
12.1.2	Partial pressure and partial volume	579
12.1.3	Dalton's rule for ideal gas mixtures	580
12.1.4	Amagat-Leduc rule for ideal gas mixtures	581
12.1.5	Properties of ideal gas mixtures	581
12.1.6	Real gas mixtures	583
12.2	Mixtures of Ideal Gases and Vapors	584
12.2.1	Mixtures of air and water vapor	585
12.2.2	Relative humidity and humidity ratio	587
12.2.3	The psychrometric chart	588
12.2.4	Adiabatic saturation and wet-bulb temperature	591
12.3	Processes of Air-Vapor Mixtures	595
12.3.1	Cooling, dehumidification and heating	595
12.3.2	Evaporative cooling	597
12.3.3	Cooling towers	599

12.4	Worked Examples	601
	Problems	627
	References	630
<b>Chapter 13</b>		
<b>Reactive Mixtures</b>		<b>631</b>
13.1	Chemical Reactions of Fuels	631
13.1.1	Mass balance for a combustion reaction	632
13.2	Energy Balance for a Combustion Process	634
13.2.1	Enthalpy and internal energy of formation	635
13.2.2	Internal energy and enthalpy of reactants and products	637
13.2.3	Heats of reaction and heating values	639
13.2.4	Adiabatic flame temperature	640
13.3	Second Law Analysis of Combustion Processes	640
13.4	Chemical Equilibrium	642
13.4.1	Reactions in ideal-gas mixtures	644
13.4.2	Dissociation	646
13.5	Worked Examples	647
	Problems	674
	References	676
<b>Chapter 14</b>		
<b>Thermodynamic Property Relations</b>		<b>677</b>
14.1	Some Mathematical Relations	678
14.2	The Maxwell Relations	679
14.3	Clapeyron Equation	681
14.4	Thermodynamics Relations Involving Internal Energy, Enthalpy, Entropy and Specific Heat Capacities	682
14.4.1	Expression for the change in internal energy	682
14.4.2	Expression for the change in enthalpy	683
14.4.3	Expression for the change in entropy	684
14.4.4	Relations involving specific heat capacities	685
14.5	Volume Expansivity, Isothermal Compressibility, and Adiabatic Compressibility	686
14.6	The Joule-Thomson Coefficient	687

14.7	Developing Thermodynamic Property Tables	687
14.8	Equations of State for Gases	689
14.9	Worked Examples	691
	Problems	698
	References	701
<b>Chapter 15</b>		
<b>Statistical Interpretation of Entropy</b>		<b>702</b>
15.1	Background	702
15.2	Boltzmann Equation	703
15.3	Model for Thermal Entropy	706
15.4	Model for Configurational Entropy	710
15.5	Summary	713
15.6	Worked Examples	714
	Problems	718
	References	720
<b>Index</b>		<b>723</b>
