CHAPTER 1 Material Studies at High Pressure..... 1

Surinder M. Sharma, Nandini Garg

1 Introduction	2
2 Experimental and Theoretical Methods to Study Materials at High Pressure	6
2.1 Diamond Anvil Cells.....	7
2.2 Preparation of Diamond Anvil Cells for Experiments	9
3 Diagnostics	12
3.1 High-Pressure Diffraction	12
3.2 Hydrostatic and Nonhydrostatic Stresses and Radial X-Ray Diffraction	13
3.3 High-Pressure Spectroscopy and Inelastic Scattering	13
3.4 High-Pressure Transport Property Measurements	14
3.5 High-Pressure 3D Tomography.....	14
4 Some Case Studies	14
4.1 Mechanism of Phase Transitions Under High Pressure	15
4.2 Pressure-Induced Amorphization	22
4.3 Negative Thermal Expansion and Amorphization.....	28
4.4 Recrystallization of Amorphous Phase.....	32
4.5 Amorphous to Amorphous Phase Transition.....	33
4.6 Dissociation Under Pressure	36
4.7 Molecular Solids.....	38
5 Future Prospects	39
Acknowledgments.....	39
References.....	39

CHAPTER 2 Materials Under Shock Waves..... 49

Satish C. Gupta, K.D. Joshi, S. Banerjee

1 Introduction	50
2 Dynamic Compression Process.....	51
2.1 Interactions of Waves	55
2.2 Generation of Shock Waves	57
2.3 Negative Pressure and Spalling.....	58
3 Experimental Techniques	60
3.1 Gas Gun.....	60

3.2	Propellant Gun.....	61
3.3	Electric Gun.....	62
3.4	Particle Velocity Measurement	63
4	Case Studies	66
4.1	High Strain Rate Mechanical Properties of Al Alloys, Al2014-T4 and Al2024-T4	66
4.2	Shock Wave–Induced Omega Phase Formation in Zr and Zr–Nb Alloys.....	70
5	Theoretical Methods.....	73
5.1	Calculation of Equation of State.....	74
5.2	Phase Transitions.....	76
6	Theoretical Studies.....	77
6.1	Theoretical Investigations on Carbides of Uranium and Thorium.....	77
6.2	Shock Hugoniot and Dynamic Stability of Bi in bcc Phase	83
7	Summary and Discussion.....	87
	References.....	87
 CHAPTER 3 Materials for Hostile Corrosive Environments.....		91
	<i>U. Kamachi Mudali</i>	
1	Introduction	92
2	Corrosion by Liquid Sodium	94
2.1	Mechanisms of Sodium Corrosion.....	95
2.2	Role of Impurities in Sodium Corrosion	95
2.3	Factors Influencing Sodium Corrosion	96
2.4	Material Testing and Evaluation in Molten Sodium	96
3	Materials for the Hostile Corrosive Environments in Steam Water Environments of Nuclear Power Plants.....	99
3.1	Material Selection for Steam Water Environments in NPPs.....	99
3.2	Steam Generator Corrosion Problems	100
3.3	Equipment Failures in Steam Generators	101
3.4	Chemistry Control of a Steam/Water Circuit	102
3.5	Materials for Steam Water Environments in FBRs	102
4	Materials in Seawater Environments	104
4.1	Extreme Conditions of Seawater	105
4.2	Corrosion Issues of Metallic Materials in Seawater.....	105
4.3	Corrosion Issues of Concrete Materials in Seawater.....	107
4.4	Microbiologically Influenced Corrosion of Materials in Seawater Environments.....	107
4.5	Corrosion Monitoring of Materials in Seawater Environments	108
4.6	Corrosion Protection Methods of Materials in Seawater	109

5	Corrosion Issues of Materials for Nitric Acid Corrosive Environments	109
5.1	Stainless Steels for Nitric Acid Application.....	110
5.2	Titanium and Its Alloys for Nitric Acid Service	113
5.3	Corrosion of Zirconium and Its Alloys for Nitric Acid Service	114
6	Pyrochemical Reprocessing of Spent Metallic Fuel and Durability of Materials in Molten Salt and Uranium Environments.....	116
6.1	Corrosion of Materials in Molten LiCl-KCl Salt Medium	116
6.2	Development of Corrosion-Resistant Materials and Coatings for Molten LiCl-KCl Salt Medium.....	117
6.3	Molten Uranium Medium	123
7	Conclusions	124
	Acknowledgments.....	125
	References.....	125

CHAPTER 4 Materials for Hostile Chemical Environments 129

V. Sudarsan

1	Introduction	130
2	Different Types of Hostile Environments.....	130
3	Acid-Resistant Materials.....	131
4	Alkali-Resistant Materials	131
5	Materials Resistant to Corrosive Gases (H ₂ S, SO _x , NO _x , etc.).....	132
6	Methods to Monitor Surface Modifications Occurring With Materials Due to Hostile Environments.....	133
6.1	Scanning Electron Microscopic Technique	134
6.2	Atomic Force Microscopic Technique.....	134
7	Stainless Steel in Hostile Chemical Environments	135
8	Different Types of Steels	137
9	Classification of Steel for Engineering Uses.....	137
10	Surface Roughness.....	137
11	Refractory Materials	139
12	Reaction of Refractory Materials With Slag.....	140
13	Pozzolans.....	140
14	Tungsten Carbide	141
15	Silicon Carbide.....	142
16	Boron Nitride	143
17	Gallium Nitride	144
18	Borosilicate Glass	144
19	Diamond-Based Materials	146
20	Resins and Polymers for Hostile Chemical Environments	147
21	Acrylic Resins.....	147
22	Epoxy Resins.....	148
23	Silicone Resins.....	149

24	Buna N	150
25	Ethylene Propylenediene Monomer Rubber	150
26	Fluorocarbon Elastomers	151
27	Styrene-Butadiene-Based Polymers.....	151
28	Plastics That Can Survive Hostile Environments	151
29	Designing Fibers of Polymers With Resistance to Hostile Chemical Environments	151
30	Chlorine and Fluorinated Polymers.....	152
31	Fluorinated Polymers or Fibers	152
	31.1 Teflon	152
	31.2 Fluorinated Ethylene Propylene (FEP).....	153
32	Chemically Resistant Fibers Based on Aromatic Ring-Containing Polymers	153
	32.1 Polyphenylene Sulfides	154
	32.2 Polyphenylene Oxide	154
	32.3 Polyether Ether Ketones.....	155
	32.4 Poly (Ether Imide) Fibers.....	155
33	Composite Materials	155
	33.1 Terephthalic Resins as Storage Tank Materials.....	156
	33.2 Corrosion or Degradation of PET.....	156
	33.3 Materials for Constructing Pickling and Galvanizing Tanks	156
	33.4 Aromatic Polyamides (Aramids).....	157
34	Conclusions	157
	References.....	157

CHAPTER 5 High Performance Polymer Nanocomposites for Structural Applications 159

K.A. Dubey, P.A. Hassan, Y.K. Bhardwaj

1	Introduction	160
2	Nanofillers	160
	2.1 Carbon Nanotubes	161
	2.2 Graphene.....	162
	2.3 Inorganic Fillers	162
	2.4 Natural Fillers.....	163
3	Polymers.....	164
	3.1 Elastomers	164
	3.2 Thermoplastics.....	164
	3.3 Thermosets.....	164
4	Preparation of Polymer Nanocomposites	165
	4.1 Solvent Mixing	165
	4.2 Emulsion (Latex) Mixing.....	165
	4.3 Melt Mixing.....	165
	4.4 In Situ Polymerization.....	166

4.5 In Situ Nanoparticle Synthesis.....	166
4.6 Exfoliation.....	166
5 Characterization of Nanocomposites.....	166
5.1 Morphological Characterization.....	166
5.2 Mechanical Properties.....	168
6 Tailoring Morphology and Interface of Polymer Nanocomposites.....	170
6.1 Interface Modification.....	170
6.2 CNT Modification.....	171
6.3 Noncovalent Functionalization.....	172
6.4 Covalent Functionalization.....	172
6.5 Graphene Modification.....	174
6.6 Inorganic/Metallic Nanoparticle Modification.....	175
6.7 Natural Fillers.....	177
7 High-Modulus Polymer Nanocomposites: Recent Developments.....	177
7.1 Nanocarbon/Polymer Composites.....	177
7.2 Synergistic Interactions in Hybrid Fillers.....	184
8 Conclusions.....	189
List of Acronyms and Abbreviations.....	189
References.....	190

CHAPTER 6 Glasses and Glass-Ceramics for Vacuum and High-Temperature Applications..... 195

<i>A. Ananthanarayanan, M. Goswami, G.P. Kothiyal</i>	
1 Introduction.....	196
2 Glass and Glass-Ceramics and Related Properties.....	197
2.1 Glasses.....	197
2.2 Glass-Ceramics.....	202
2.3 Methods of Glass and Glass-Ceramic Formation.....	205
3 Wettability and Joining of Metals Using Glasses.....	206
3.1 Theories of Glass-to-Metal Bonding.....	208
4 Types of Seals and Their Configuration.....	211
4.1 Expansion Matched Seals.....	211
4.2 Unmatched Seals.....	212
5 Sealants for High Temperature (Solid Oxide Fuel Cell Sealants).....	214
6 Preparation of Glass-to-Metal Seals.....	217
6.1 Pretreatment of Metal Parts and Their Assembly.....	217
6.2 Qualification of Seals.....	220
7 Machinable Glass-Ceramics.....	226
8 Future Perspectives.....	228
References.....	229

CHAPTER 7 Natural Glasses Under Extreme Conditions 235

P. Sengupta

1	Introduction	235
2	Glass	237
3	Natural Glasses of Volcanic Origin	241
4	Natural Glasses of Nonvolcanic Origin	242
4.1	Origin: Meteoritic Impact	243
4.2	Origin: Seismic Events	245
4.3	Origin: Nuclear Explosion	245
4.4	Origin: Lightning	246
4.5	Origin: Radiation Damage	248
5	Leaching of Glass	248
5.1	Leaching Mechanisms of Glasses	249
6	Alteration of Natural Glasses Under Extreme Geological Conditions	250
6.1	Basaltic Glasses	250
6.2	Impact Glasses	251
6.3	Tektites	252
7	Alteration of Natural Glasses Under Extreme Experimental Conditions	252
7.1	Obsidian Glass	252
7.2	Tektite Glass	253
8	Conclusions and Future Directions	254
	Acknowledgments	255
	References	255

CHAPTER 8 Protective Hard Coatings for Tribological Applications 259

M. Roy

1	Introduction	260
1.1	Tribology	260
1.2	Wear	261
2	General Methods of Deposition	262
2.1	Physical Vapor Deposition	262
2.2	Chemical Vapor Deposition	263
2.3	Electroless Deposition	263
2.4	Slurry Method	263
2.5	Sol–Gel Process	264
2.6	Electrochemical Processing	264
3	Characterization Tools	264
3.1	Atomic Force Microscopy	264
3.2	Scanning Electron Microscopy	265
3.3	X-Ray Diffraction	265
3.4	Raman Spectroscopy	266

4	Testing Methods	266
5	Hard Coatings for Tribological Applications	268
5.1	Alumina	268
5.2	Diamond	271
5.3	Diamond-Like Carbon.....	282
6	Summary	287
	References.....	287
CHAPTER 9 Intermetallics and Alloys for High Temperature Applications.....		293
	<i>R. Tewari, N.K. Sarkar, D. Harish, B. Vishwanadh, G.K. Dey, S. Banerjee</i>	
1	Introduction	294
2	Intermetallics	296
2.1	Crystal Structure of Intermetallic Compounds	296
2.2	Nickel Aluminides.....	302
2.3	Titanium Aluminides.....	306
2.4	Iron Aluminides.....	311
2.5	Zr ₃ Al-Based Alloys.....	312
2.6	Trialuminides (Al ₃ X compounds).....	316
2.7	Aluminides With A15 Structures.....	317
2.8	Laves Phases.....	317
2.9	Beryllides.....	318
3	Silicides	319
3.1	Refractory Metals-Based In Situ Composites.....	321
3.2	Nb-Based In Situ Composite.....	322
3.3	Mo-Si-B-Based Alloys	323
4	High-Entropy Alloys	324
4.1	High-Entropy Effect	324
4.2	Sluggish Diffusion.....	325
4.3	Lattice Distortion.....	326
4.4	Synergistic Effects.....	326
5	Summary	327
	References.....	328
CHAPTER 10 Synthesis and Characterization of Borides, Carbides, and Nitrides and Their Applications.....		337
	<i>R.S. Ningthoujam</i>	
1	Introduction	338
2	Phenomena	341
2.1	Chemical Bonding.....	341
2.2	Microstructures	342
2.3	Crystal Structures	342

3	Theoretical Concepts.....	343
3.1	Electrical Resistivity.....	343
3.2	Thermal Conductivity.....	344
3.3	Optics.....	345
3.4	Magnetism	346
4	Synthesis.....	348
4.1	Nitrides	348
4.2	Carbides	352
4.3	Borides.....	353
5	Characterization Techniques.....	353
5.1	Chemical Approach.....	354
5.2	Physical Approach.....	355
6	Properties.....	356
6.1	Electrical Resistivity.....	356
6.2	Magnetization Study.....	358
6.3	Hardness	359
6.4	Plastic Deformation.....	361
6.5	Crystal Electrostatic Potential Effect.....	361
6.6	Optics.....	362
7	Applications.....	362
8	Conclusions	366
	References.....	367

CHAPTER 11 High-Temperature Ceramics..... 377

R. Mishra, R.S. Ningthoujam

1	Introduction	378
2	Classification of Ceramics	379
3	Chemical Bonding	380
3.1	Madelung Constant.....	381
3.2	Lattice Energy	382
4	Phase Transitions	383
5	Phase Diagram	383
5.1	Magnesia—Alumina System.....	385
5.2	Alumina-Silica System.....	385
6	Preparation and Processing.....	387
6.1	Chemical Methods of Synthesis.....	387
6.2	Other Methods.....	390
6.3	Sintering Process	390
7	Characterization	391

8	Properties of Refractory Ceramics	391
8.1	Brittleness	392
8.2	Toughness	392
8.3	Compressive Strength.....	392
8.4	Electrical Conductivity.....	392
8.5	Vaporization of Ceramics.....	393
8.6	Thermodynamics of Nuclear Materials	394
9	Examples of High-Temperature Ceramics and Their Applications.....	394
9.1	Magnesia.....	394
9.2	Alumina	395
9.3	Zirconia.....	397
9.4	Ceria.....	398
9.5	Magnesium Aluminate Spinel.....	399
9.6	Magnesium Stannate	399
9.7	Alumina-Yttria Phases	399
9.8	NiCoCrAlY-ZrO ₂ ·Y ₂ O ₃ Barrier Coating Materials	399
9.9	Metal Tungstates	400
9.10	Tin-Doped Indium Oxide and SrCu ₂ O ₂	400
9.11	Ba ₂ Ti ₉ O ₂₀	401
9.12	AB ₂ O ₄ and A ₂ O ₃	401
9.13	Ceramics for Gas Turbines.....	401
9.14	Ceramics in Solid-State Fuel Cells	402
9.15	Titania-Modified Cements, Tiles, and Bricks	402
9.16	Transparent Machinable Calcium-Mica Glass-Ceramics	402
9.17	Ceramics and Porcelain Tiles and Bricks	402
9.18	Immobilization of Nuclear Wastes Using Ceramics	403
9.19	Acid-Resistant Ceramic Materials	403
10	Conclusions	404
	References.....	404

CHAPTER 12 Cold Plasma Processing of Materials for Extreme Conditions 411

D.S. Patil, R. Kar, S.S. Chopade

1	Introduction	412
2	The Role of Plasma in Chemical Vapor Deposition	412
3	Plasma Sources for Chemical Vapor Deposition Applications.....	413
3.1	Direct Current Discharges.....	414
3.2	Radio Frequency Discharges.....	414
3.3	Microwave Discharges	416
3.4	Microwave Electron Cyclotron Resonance Plasma.....	418

4	Plasma-Assisted Chemical Vapor Deposition	420
4.1	Diamondlike Carbon Coating by Microwave Electron Cyclotron Resonance Plasma Chemical Vapor Deposition Process.....	420
4.2	Microwave Plasma-Enhanced Chemical Vapor Deposition for Deposition of Diamond and Carbon Nanostructures.....	427
4.3	Radio Frequency Plasma-Assisted Metal Organic Chemical Vapor Deposition of Yttrium-Oxide Thin Films	435
4.4	Radio Frequency Plasma-Assisted Metal Organic Chemical Vapor Deposition of Ytria-Stabilized Zirconia Thin Films	446
4.5	Radio Frequency Plasma-Assisted Chemical Vapor Deposition (for SiO _x -Based Corrosion-Resistant Coatings on Bell Metal Surfaces	456
5	Conclusions	463
	Acknowledgments.....	463
	References.....	463

CHAPTER 13 Tailored Thermal Expansion Material for High-Temperature Applications

	<i>A.K. Tyagi, S.N. Achary</i>	
1	Introduction	471
2	Thermal Expansion of Materials: Some Fundamental Aspects	472
2.1	Origin of Thermal Expansion	473
3	Experimental Techniques for Thermal Expansion Measurements.....	473
3.1	Dilatometer	474
3.2	Diffraction Methods for Thermal Expansion Studies.....	476
4	Correlation of the Thermal Expansion Coefficient With Other Physical Properties of Materials	477
4.1	Role of Lattice Packing Fraction and Compressibility in Thermal Expansion	478
4.2	Role of Defects, Impurities, and Phase Transitions in Thermal Expansion	478
5	Different Classes of Materials Based on Thermal Expansion Behaviors.....	478
5.1	Tailoring of Thermal Expansion Behavior Using a Solid Solution Formation Approach.....	479
6	Materials With Low or Negative Thermal Expansion Behavior	483
7	Tailoring of Thermal Expansion of Materials Based on Crystallographic Concepts	484
7.1	Tailoring of Thermal Expansion Behavior in Some Molybdates and Tungstates	488
7.2	Thermal Expansion Behavior of Scheelite- and Zircon-Type ABO ₄ Materials	491
8	Thermal Expansion Behavior of Perovskite-Type Materials	493
9	Conclusion	496
	References.....	497

CHAPTER 14	Materials Under Intense Laser Irradiation	501
	<i>P.A. Naik, V. Arora, Y.B.S.R. Prasad, J.A. Chakera, P.D. Gupta</i>	
1	High Energy Density State of Matter	503
1.1	High Energy Density Physics	503
1.2	Intense Laser–Matter Interaction	503
2	X-Ray Emission from Laser-Produced Plasma	506
2.1	X-Ray Emissions in Laser–Plasma Interactions	507
2.2	Opacity of X-Rays	508
2.3	Techniques for X-Ray Diagnostics	511
3	Particle Acceleration With Lasers	512
3.1	Plasma Wake-Field–Based Electron Acceleration	513
3.2	Proton/Ion Acceleration With Ultrahigh-Intensity Lasers	516
3.3	Neutron Generation	517
4	Shock Wave Propagation	518
4.1	Measurement of Shock Velocity	520
4.2	Measurement of Particle Velocity	521
5	Warm Dense Matter: an Exotic State	524
5.1	Isochoric Heating	524
5.2	Probing of Warm Dense Matter	525
6	Applications	525
6.1	Time-Resolved X-Ray Diffraction	526
6.2	Use of Laser-Generated Protons in Oncology	527
6.3	Use of Laser-Generated Protons in Positron Emission Tomography	528
	References	528
CHAPTER 15	Laser-Induced Vaporization—Mass Spectrometry Studies on Refractory Materials at Ultrahigh Temperatures	533
	<i>M. Joseph, N. Sivakumar, P. Manoravi</i>	
1	Introduction	534
1.1	Pulse Heating Methods	535
2	Laser–Solid Interaction	536
2.1	Laser-Induced Vaporization	537
2.2	Langmuir Vaporization	538
2.3	Gas Dynamic Flow	539
2.4	Knudsen Layer	539
2.5	Literature Survey of Laser Vaporization Studies	541
3	Experimental Method	544
3.1	Experimental Procedure	546
3.2	Samples Studied	546

4	Results and Discussion.....	547
4.1	Velocity Distributions of Neutrals and Estimation of Temperatures	547
4.2	Determination of Partial Pressure	554
4.3	Application of Laser-Induced Vaporization—Mass Spectrometry in Understanding Pulsed Laser Deposition	567
5	Conclusion.....	568
	References.....	570

CHAPTER 16 Nanoclusters Under Extreme Ionization Conditions..... 575

P. Sharma, R.K. Vatsa

1	Introduction to Clusters.....	576
1.1	Introduction	576
1.2	What Are Clusters and How Do They Differ From Nanoparticles?.....	576
1.3	Why Study Clusters Under Extreme Laser Ionization Conditions?	576
2	Different Methods for Preparation of Clusters.....	578
2.1	Supersonic Jet Source	578
2.2	The Pickup Source	579
2.3	Laser Ablation and Vaporization Cluster Source	579
3	Characterization of Cluster Source.....	580
4	Instrumentation.....	581
5	Clusters Under Extreme Ionization Conditions: Interaction With Lasers	583
5.1	Brief Introduction to Interaction of Laser With Atoms and Molecules.....	583
5.2	Clusters Under Intense Laser Pulses.....	586
6	Different Studies Related to Interaction of Laser With Clusters.....	588
6.1	Interaction of Clusters With Laser Pulses of Nanosecond Pulse Duration.....	588
6.2	Interaction With Pico- and Femtosecond Laser Pulses	597
6.3	Interaction With Few-Cycle Laser Pulses.....	602
7	Applications.....	603
7.1	Coulomb Explosion-Driven Nuclear Fusion in Clusters: Generation of Neutrons.....	603
7.2	Cluster-Assisted Generation of Energetic Multiply Charged Atomic Ions and Electrons	604
7.3	Generation of Intense Ultrashort X-Ray Pulses	604
	Acknowledgments.....	605
	References.....	605

CHAPTER 17 Materials Response Under Irradiation..... 615

M. Vijayalakshmi

1	Introduction	615
2	Irradiation — Processes Leading to Extreme Situations	617
3	Irradiation Using Different Incident Beams.....	620

4	Defect Dynamics in Materials Under Irradiation.....	620
5	Irradiation-Enhanced Diffusion	625
6	Irradiation-Induced Segregation	626
6.1	Inverse Kirkendall Effect	629
6.2	Solute Defect Complexes.....	629
7	Radiation-Induced/Enhanced Phase Transformation	630
8	Influence of Radiation-induced Microstructure on Mechanical Properties.....	635
9	Multiscale Modeling to Predict Irradiation Behavior of Materials	640
10	Future Trends	642
11	Summary	642
	References.....	643
CHAPTER 18	Radiation—Matter Interaction and Radiation-Tolerant Oxides	651
	<i>V. Grover, M.K. Patel, A.K. Tyagi, S. Banerjee</i>	
1	Introduction	652
2	Nuclear Fission	653
3	Typical Nuclear Reactors.....	653
4	Reactors and Radioactivity	654
5	Methods to Dispose Nuclear Waste and Material Requirements	655
5.1	Direct Disposal.....	655
5.2	Partitioning and Transmutation.....	655
6	Damage Caused by Radiation	656
6.1	Neutrons.....	656
6.2	β -, γ -Decays	656
6.3	α -Decay	656
6.4	Fission Fragments.....	657
7	The Rate/Duration of Radiation Damage.....	657
8	Methods to Evaluate Damage.....	657
8.1	In-pile Irradiation in Reactor	657
8.2	Analysis of Natural Analogues and Actinide Doping	658
8.3	Computer Simulations.....	658
8.4	Ion Beams From Accelerators	658
9	Ion—Solid Interaction	659
9.1	Ion Beam Characteristics and Energy Transfer	660
9.2	Range	660
9.3	Energy-Loss Mechanisms	661
9.4	Computation of Nuclear Energy Loss	661
9.5	Computation of Electronic Energy Loss.....	663
10	Damage in Nuclear-Stopping Regime.....	665

11	Damage in Electronic-Stopping Regime: Track Formation.....	666
11.1	Identification of Tracks	666
11.2	High Pressure—Temperature and Swift Heavy Ions.....	667
12	Models of Track Formation	667
12.1	Coulomb Explosion.....	667
13	Phase Transformations by SHI Irradiation.....	668
14	Ion Hammering and Texture Changes.....	669
15	Irradiation Effects in Some Representative Nuclear Materials.....	669
15.1	Radiation Stability and Crystal Structure	670
15.2	Effect of Powder Properties	674
16	Conclusions	677
	References.....	678

CHAPTER 19 Diamond-Based Radiation Detectors for Applications in Highly Corrosive Solutions and High-Radiation Fields 683

D. Jain, J. Nuwad, N. Manoj, V. Sudarsan

1	Introduction	684
2	Structure and Properties of Diamond	684
3	Diamond as a Host for Radiation Sensing	686
3.1	Diamond for Radiation Detection Under Extreme Conditions	688
3.2	Natural Diamonds for Radiation Detection	691
4	Laboratory Synthesis of Diamond.....	691
4.1	Characterization of CVD Diamonds for Radiation Detection	693
4.2	Postgrowth Treatment of CVD Diamond for Detector Application	693
5	History of Diamond-Based Radiation Detectors.....	694
5.1	Design of Diamond-Based Alpha-Radiation Detectors.....	695
5.2	Design of Diamond α -Detectors for Use in Corrosive Liquid Media	697
5.3	Electronics and Detection Geometry for CVD Diamond α -Detectors	700
6	Performance of CVD Diamond α -Detectors.....	701
7	Factors Governing the Performance of CVD Diamond α -Detectors.....	705
7.1	Effect of Bias Potential	705
7.2	Charge Collection Efficiency	706
7.3	Charge Collection Distance.....	707
7.4	Polarization in Diamond-Based Detectors.....	708
7.5	Polarization Quenching	710
8	Neutron Detection in Diamond	710
9	Challenges and Future Prospective in Diamond Radiation Detectors.....	711
10	Conclusions	711
	Acknowledgment.....	712
	References.....	712

CHAPTER 20 Severe Plastic Deformation of Materials	717
<i>R. Kapoor</i>	
1 Introduction	717
2 Theory and Phenomena of Severe Plastic Deformation	719
2.1 Quantifying Plastic Deformation	719
2.2 Mechanism of Microstructural Refinement During SPD	719
3 Methods to Impart Severe Plastic Deformation	723
3.1 Equal Channel Angular Pressing	723
3.2 High Pressure Torsion	725
3.3 Multiaxial Forging.....	725
3.4 Accumulative Roll Bonding.....	726
3.5 Other SPD Processes.....	727
3.6 Continuous SPD processes.....	727
4 Characterization and Properties	727
4.1 Microstructure	727
4.2 Mechanical Behavior.....	733
5 Applications.....	745
6 Summary	748
References.....	750
CHAPTER 21 Materials in a High Magnetic Field	755
<i>S.B. Roy</i>	
1 Introduction	756
1.1 Traditional and Newer Definitions of High Magnetic Field	756
1.2 Why the Study of Materials in a Magnetic Field Is Important.....	757
2 Generation of High Magnetic Fields	757
2.1 Steady Fields	758
2.2 Pulsed Fields.....	758
3 Response of Materials in a Magnetic Field.....	759
3.1 Metals and Semiconductors	759
3.2 Classical and Quantum Hall Effect.....	768
3.3 Diamagnetic, Paramagnetic, and Ferromagnetic Materials.....	770
3.4 Multiferroic Materials	773
3.5 Biological Materials	774
4 Superconductors in Magnetic Field	776
4.1 Flux-Line Lattice or Vortex Matter in Type II Superconductors	776
4.2 Vortex Matter and Its Phase Transitions.....	776
4.3 Quenched Disorder in Vortex Matter and Critical Current-Carrying Capacity of Type II Superconductors	778

5 Magnetoelastic Materials With Current Technological Interest 779
 5.1 Magnetostrictive Materials and Magnetic Shape Memory Alloys..... 779
 5.2 Magnetocaloric and Magnetoresistive Materials 780
6 Future Outlook 786
References..... 787

CHAPTER 22 Properties of Materials Under High Electric Field..... 791

S.N. Achary, A.K. Tyagi

1 Introduction 791
2 Interaction of Matter With Electric and Electromagnetic Field 793
 2.1 Conductors 794
 2.2 Semiconductors 798
 2.3 Insulators 801
 2.4 Dielectric 802
3 Dielectric Materials for High-Speed Electronic Circuits 804
4 Dielectrics Under Extreme Potential (Dielectric Breakdown)..... 805
5 Case Studies on High and Low Dielectric Constant Materials..... 809
6 Summary and Conclusions 817
References..... 818
