Preface.....	xvii
Authors.....	xix

Part I Thermodynamic Principles

Chapter 1

Introduction and Definition of Terms	3
1.1 Introduction.....	3
1.2 The Concept of State.....	4
1.3 Example of Equilibrium.....	8
1.4 The Equation of State of an Ideal Gas	9
1.5 The Units of Energy and Work	12
1.6 Extensive and Intensive Thermodynamic Variables.....	13
1.7 Equilibrium Phase Diagrams and Thermodynamic Components	13
1.8 Laws of Thermodynamics.....	16
1.8.1 The First Law of Thermodynamics	17
1.8.2 The Second Law of Thermodynamics.....	17
1.8.3 The Third Law of Thermodynamics	17
1.9 Summary.....	17
1.10 Concepts and Terms Introduced in Chapter 1.....	18
1.11 Qualitative Example Problems.....	19
1.12 Quantitative Example Problems.....	20
Problems	21

Chapter 2

The First Law of Thermodynamics	23
2.1 Introduction.....	23
2.2 The Relationship between Heat and Work.....	24
2.3 Internal Energy and the First Law of Thermodynamics.....	25
2.4 Constant-Volume Processes	29
2.5 Constant-Pressure Processes and the Enthalpy, H	30
2.6 Heat Capacity.....	31
2.7 Reversible Adiabatic Processes.....	37
2.8 Reversible Isothermal Pressure or Volume Changes of an Ideal Gas.....	40
2.9 Other Forms of Work	41
2.9.1 Magnetic Work on a Paramagnetic Material	41
2.9.2 Electrical Work on a Dielectric Material.....	42
2.9.3 Work to Create or Extend a Surface	42
2.10 Summary.....	43
2.11 Concepts and Terms Introduced in Chapter 2.....	45

2.12	Qualitative Example Problems.....	45
2.13	Quantitative Example Problems.....	47
	Problems	51
	Appendix 2A: Note on the Sign Convention of δw	54
Chapter 3		
	The Second Law of Thermodynamics.....	57
3.1	Introduction.....	57
3.2	Spontaneous or Natural Processes	58
3.3	Entropy and the Quantification of Irreversibility.....	59
3.4	Reversible Processes	61
3.5	Illustration of Reversible and Irreversible Processes	61
	3.5.1 The Reversible Isothermal Expansion of an Ideal Gas.....	62
	3.5.2 The Free Expansion of an Ideal Gas.....	63
3.6	Further Differences between Reversible and Irreversible Expansion.....	64
3.7	Compression of an Ideal Gas	65
	3.7.1 Reversible Isothermal Compression	65
3.8	The Adiabatic Expansion of an Ideal Gas.....	66
3.9	Summary Statements	67
3.10	The Properties of Heat Engines	67
3.11	The Thermodynamic Temperature Scale.....	71
3.12	The Second Law of Thermodynamics	74
3.13	Maximum Work	76
3.14	Entropy and the Criterion for Equilibrium	78
3.15	The Combined Statement of the First and Second Laws of Thermodynamics	79
3.16	Summary.....	81
3.17	Concepts and Terms Introduced in Chapter 3.....	83
3.18	Qualitative Example Problems.....	83
3.19	Quantitative Example Problems.....	85
	Problems	90
Chapter 4		
	The Statistical Interpretation of Entropy	93
4.1	Introduction.....	93
4.2	Entropy and Disorder on an Atomic Scale	94
4.3	The Concept of Microstate.....	95
4.4	The Microcanonical Approach	96
	4.4.1 Identical Particles on <i>Distinguishable</i> Sites with Different Assigned Energies.....	96
	4.4.2 Configurational Entropy of Differing Atoms in a Crystal.....	98
	4.4.3 Configurational Entropy of Magnetic Spins on an Array of Atoms	102
4.5	The Boltzmann Distribution	104

4.6	The Influence of Temperature.....	108
4.7	Thermal Equilibrium and the Boltzmann Equation.....	110
4.8	Heat Flow and the Production of Entropy.....	111
4.9	Summary.....	113
4.10	Concepts and Terms Introduced in Chapter 4.....	114
4.11	Qualitative Example Problems.....	115
4.12	Quantitative Example Problems.....	116
	Problems.....	119

Chapter 5

	Fundamental Equations and Their Relationships.....	121
5.1	Introduction.....	121
5.2	The Enthalpy, H	123
5.3	The Helmholtz Free Energy, A	123
5.4	The Gibbs Free Energy, G	128
5.5	The Fundamental Equations for a Closed System.....	129
5.6	The Variation of the Composition within a Closed System.....	131
5.7	The Chemical Potential.....	131
5.8	Thermodynamic Relations.....	134
5.9	Maxwell's Relations.....	135
5.10	Examples of the Application of Maxwell Relations.....	137
5.10.1	The First TdS Equation.....	137
5.10.2	The Second TdS Equation.....	139
5.10.3	S and V as Dependent Variables and T and P as Independent Variables.....	141
5.10.4	An Energy Equation (Internal Energy).....	142
5.10.5	Another Energy Equation (Enthalpy).....	143
5.10.6	A Magnetic Maxwell Relation.....	143
5.10.7	S , V , and M with Independent Variables T , P , and \mathcal{H}	144
5.11	Another Important Formula.....	145
5.12	The Gibbs–Helmholtz Equation.....	145
5.13	Summary.....	147
5.14	Concepts and Terms Introduced in Chapter 5.....	148
5.15	Qualitative Example Problems.....	148
5.16	Quantitative Example Problems.....	150
	Problems.....	152

Chapter 6

	Heat Capacity, Enthalpy, Entropy, and the Third Law of Thermodynamics.....	155
6.1	Introduction.....	155
6.2	Theoretical Calculation of the Heat Capacity.....	156
6.3	The Empirical Representation of Heat Capacities.....	162
6.4	Enthalpy as a Function of Temperature and Composition.....	162

6.5	The Dependence of Entropy on Temperature and the Third Law of Thermodynamics	172
6.5.1	Development of the Third Law of Thermodynamics	172
6.5.2	Apparent Contradictions to the Third Law of Thermodynamics	175
6.6	Experimental Verification of the Third Law	177
6.7	The Influence of Pressure on Enthalpy and Entropy	182
6.8	Summary	184
6.9	Concepts and Terms Introduced in Chapter 6	185
6.10	Qualitative Example Problems	186
6.11	Quantitative Example Problems	187
	Problems	193
	Appendix 6A	194

Part II

Phase Equilibria

Chapter 7

	Phase Equilibrium in a One-Component System	199
7.1	Introduction	199
7.2	The Variation of Gibbs Free Energy with Temperature at Constant Pressure	200
7.3	The Variation of Gibbs Free Energy with Pressure at Constant Temperature	204
7.4	The Gibbs Free Energy as a Function of Temperature and Pressure	205
7.5	Equilibrium between the Vapor Phase and a Condensed Phase	210
7.6	Graphical Representation of Vapor Phase and Condensed Phase Equilibria	212
7.7	Solid–Solid Equilibria	212
7.8	The Effect of an Applied Magnetic Field on the P - T Diagram	217
7.9	Summary	218
7.10	Concepts and Terms Introduced in Chapter 7	219
7.11	Qualitative Example Problems	220
7.12	Quantitative Example Problems	222
	Problems	226

Chapter 8

	The Behavior of Gases	229
8.1	Introduction	229
8.2	The P - V - T Relationships of Gases	229
8.3	The Thermodynamic Properties of Ideal Gases and Mixtures of Ideal Gases	230
8.3.1	Mixtures of Ideal Gases	230
8.3.1.1	Mole Fraction	231

8.3.1.2	Dalton's Law of Partial Pressures	231
8.3.1.3	Partial Molar Quantities	232
8.3.2	The Enthalpy of Mixing of Ideal Gases.....	234
8.3.3	The Gibbs Free Energy of Mixing of Ideal Gases.....	235
8.3.4	The Entropy of Mixing of Ideal Gases	236
8.4	Deviation From Ideality and Equations of State for Real Gases	236
8.5	The Van Der Waals Fluid.....	240
8.6	Other Equations of State for Nonideal Gases	250
8.7	Further Thermodynamic Treatment of Nonideal Gases.....	251
8.8	Summary.....	259
8.9	Concepts and Terms Introduced in Chapter 8.....	260
8.10	Qualitative Example Problems.....	260
8.11	Quantitative Example Problems.....	261
	Problems	265

Chapter 9

	The Behavior of Solutions.....	267
9.1	Introduction.....	267
9.2	Raoult's Law and Henry's Law	267
9.3	The Thermodynamic Activity of a Component in Solution	271
9.4	The Gibbs–Duhem Equation	273
9.5	The Gibbs Free Energy of Formation of a Solution.....	275
9.5.1	The Molar Gibbs Free Energy of a Solution and the Partial Molar Gibbs Free Energies of the Components of the Solution	275
9.5.2	The Change in Gibbs Free Energy due to the Formation of a Solution	277
9.5.3	The Method of Tangential Intercepts.....	278
9.6	The Properties of Ideal Solutions.....	279
9.6.1	The Change in Volume Accompanying the Formation of an Ideal Solution	279
9.6.2	The Enthalpy of Formation of an Ideal Solution	281
9.6.3	The Entropy of Formation of an Ideal Solution.....	282
9.7	Nonideal Solutions	285
9.8	Application of the Gibbs–Duhem Relation to the Determination of Activity	288
9.8.1	The Relationship between Henry's and Raoult's Laws.....	289
9.8.3	Direct Calculation of the Total Molar Gibbs Free Energy of Mixing.....	290
9.9	Regular Solutions	292
9.10	A Statistical Model of Solutions	298
9.10.1	Extensions of the Regular Solution Model: The Atomic Order Parameter.....	303
9.10.2	Including Second-Neighbor Interactions	306

9.11	Subregular Solutions	307
9.12	Modified Regular Solution Model for Application to Polymers	309
9.12.1	The Flory–Huggins Model	309
9.13	Summary	310
9.14	Concepts and Terms Introduced in Chapter 9	313
9.15	Qualitative Example Problems	313
9.16	Quantitative Example Problems	315
	Problems	317

Chapter 10

	Gibbs Free Energy Composition and Phase Diagrams of Binary Systems	321
10.1	Introduction	321
10.2	Gibbs Free Energy and Thermodynamic Activity	322
10.3	Qualitative Overview of Common Binary Equilibrium Phase Diagrams	324
10.3.1	The Lens Diagram: Regular Solution Model	324
10.3.2	Unequal Enthalpies of Mixing	325
10.3.3	The Low-Temperature Regions in Phase Diagrams	326
10.3.4	The Eutectic and Eutectoid Phase Diagrams	327
10.3.5	The Peritectic and Peritectoid Phase Diagrams	329
10.4	Liquid and Solid Standard States	331
10.5	The Gibbs Free Energy of Formation of Regular Solutions	338
10.6	Criteria for Phase Stability in Regular Solutions	341
10.7	Phase Diagrams, Gibbs Free Energy, and Thermodynamic Activity	346
10.8	The Phase Diagrams of Binary Systems That Exhibit Regular Solution Behavior in the Liquid and Solid States	356
10.9	Summary	362
10.10	Concepts and Terms Introduced in Chapter 10	364
10.11	Qualitative Example Problems	364
10.12	Quantitative Example Problems	366
	Problems	371
	Appendix 10A	373
	Appendix 10B	376

Part III

Reactions and Transformations of Phases

Chapter 11

	Reactions Involving Gases	381
11.1	Introduction	381
11.2	Reaction Equilibrium in a Gas Mixture and the Equilibrium Constant	382
11.3	The Effect of Temperature on the Equilibrium Constant	388
11.4	The Effect of Pressure on the Equilibrium Constant	390
11.5	Reaction Equilibrium as a Compromise between Enthalpy and Entropy	391
11.6	Reaction Equilibrium in the System $\text{SO}_{2(g)}-\text{SO}_{3(g)}-\text{O}_{2(g)}$	394

11.6.1	The Effect of Temperature	395
11.6.2	The Effect of Pressure	396
11.6.3	The Effect of Changes in Temperature and Pressure	397
11.7	Equilibrium in $\text{H}_2\text{O}-\text{H}_2$ and CO_2-CO Mixtures	399
11.8	Summary	401
11.9	Concepts and Terms Introduced in Chapter 11	402
11.10	Qualitative Example Problems	403
11.11	Quantitative Example Problems	404
	Problems	410

Chapter 12

	Reactions Involving Pure Condensed Phases and a Gaseous Phase	413
12.1	Introduction	413
12.2	Reaction Equilibrium in a System Containing Pure Condensed Phases and a Gas Phase	414
12.3	The Variation of the Standard Gibbs Free Energy Change with Temperature	419
12.4	Ellingham Diagrams	422
12.5	The Effect of Phase Transformations	430
	12.5.1 Example of the Oxidation of Copper	431
	12.5.2 Example of the Chlorination of Iron	433
12.6	The Oxides of Carbon	435
	12.6.1 The Equilibrium $2\text{CO} + \text{O}_2 = 2\text{CO}_2$	440
12.7	Graphical Representation of Equilibria in the System Metal–Carbon– Oxygen	443
12.8	Summary	447
12.9	Concepts and Terms Introduced in Chapter 12	448
12.10	Qualitative Example Problems	448
12.11	Quantitative Example Problems	450
	Problems	456
	Appendix 12A	458
	Appendix 12B	459

Chapter 13

	Reaction Equilibria in Systems Containing Components in Condensed Solution ...	467
13.1	Introduction	467
13.2	The Criteria for Reaction Equilibrium in Systems Containing Components in Condensed Solution	469
13.3	Alternative Standard States	477
13.4	The Gibbs Equilibrium Phase Rule	484
13.5	Phase Stability Diagrams	489
13.6	Binary Systems Containing Compounds	503
13.7	Graphical Representation of Phase Equilibria	516

13.7.1	Phase Equilibria in the System Mg–Al–O.....	516
13.7.2	Phase Equilibria in the System Al–C–O–N Saturated with Carbon	520
13.8	The Formation of Oxide Phases of Variable Composition	523
13.9	The Solubility of Gases in Metals.....	532
13.10	Solutions Containing Several Dilute Solutes	537
13.11	Summary.....	547
13.12	Concepts and Terms Introduced in Chapter 13.....	550
13.13	Qualitative Example Problems.....	550
13.14	Quantitative Example Problems.....	551
	Problems	561
 Chapter 14		
	Electrochemistry.....	567
14.1	Introduction.....	567
14.2	The Relationship between Chemical and Electrical Driving Forces.....	569
14.3	The Effect of Concentration on EMF	574
14.4	Formation Cells.....	576
14.5	Concentration Cells.....	577
14.6	The Temperature Coefficient of the EMF.....	584
14.7	Thermal Energy (Heat) Effects.....	586
14.8	The Thermodynamics of Aqueous Solutions.....	587
14.9	The Gibbs Free Energy of Formation of Ions and Standard Reduction Potentials.....	591
14.9.1	Solubility Products.....	596
14.9.2	The Influence of Acidity	599
14.10	Pourbaix Diagrams	601
14.10.1	The Pourbaix Diagram for Aluminum	603
14.10.2	The Equilibrium between the Two Dissolved Substances.....	604
14.10.3	The Equilibrium between the Two Solids.....	605
14.10.4	One Solid in Equilibrium with a Dissolved Substance.....	607
14.10.5	The Solubility of Alumina in Aqueous Solutions.....	609
14.11	Summary.....	611
14.12	Concepts and Terms introduced in Chapter 14.....	613
14.13	Qualitative Example Problem	613
14.14	Quantitative Example Problems.....	614
	Problems	618
 Chapter 15		
	Thermodynamics of Phase Transformations	621
15.1	Thermodynamics and Driving Force.....	622
15.1.1	Phase Transformations with No Change in Composition.....	622
15.1.2	Phase Transformations with Change in Composition.....	624
15.2	Use of the T_0 Curves.....	626

15.2.1	Martensitic Transformation	628
15.2.2	Massive Transformations	628
15.2.3	The Formation of Amorphous Phases from the Liquid.....	629
15.3	Surface Energy.....	630
15.3.1	Equilibrium Shape	630
15.4	Nucleation and Surface Energy.....	632
15.4.1	Homogeneous Nucleation	632
15.4.2	Heterogeneous Nucleation	632
15.5	Capillarity and Local Equilibrium.....	634
15.6	Thermodynamics of the Landau Theory of Phase Transformations	636
15.7	Summary	643
15.8	Concepts and Terms Introduced in Chapter 15.....	643
15.9	Qualitative Example Problems.....	644
	Problems	645
	Appendix A: Selected Thermodynamic and Thermochemical Data	649
	Appendix B: Exact Differential Equations	657
	Appendix C: The Generation of Additional Thermodynamic Potentials as Legendre Transformations	659
	Nomenclature.....	669
	Answers to Selected Problems.....	671
	Index	687
