
Advances in Oil and Gas Exploration & Production

Series editor

Rudy Swennen, Department of Earth and Environmental Sciences,
K.U. Leuven, Heverlee, Belgium

Contents

1	Introduction—Geostatistical Methods for Integrating Seismic Reflection Data into Subsurface Earth Models	1
1.1	Spatial Resolution Gap	1
1.2	Seismic Inversion.	2
2	Fundamental Geostatistical Tools for Data Integration. . . .	5
2.1	Spatial Continuity Patterns Analysis and Modeling.	6
2.1.1	Bi-point Statistics	6
2.1.2	Complex Morphologic Patterns: Auxiliary and Reference Images	8
2.1.3	Spatial Random Fields	8
2.1.4	Variograms and Spatial Covariances	9
2.1.5	Spatial Representativeness of the Variogram	12
2.1.6	Spatial Continuity for Multivariate Systems	13
2.1.7	Variogram Modeling Workflow	15
2.1.8	Theoretical Variogram Models	16
2.1.9	Linear Combinations of Variogram Models: Imbricated Structures	18
2.1.10	Co-regionalized Models of Multivariate Systems	23
2.2	Estimation Models	24
2.2.1	Linear Estimation of Local Statistics	24
2.2.2	Probabilistic Model of the Geostatistical Linear Estimator	24
2.3	Kriging Estimate	26
2.3.1	Kriging System Resolution	27
2.4	Linear Estimation of Non-stationary Phenomena: Simple Kriging	28
2.5	Co-kriging Estimate	29
2.6	Co-estimation with a Secondary Variable in a Much Denser Sample Grid: Collocated Co-kriging	31
2.7	Estimation of Local Probability Distribution Functions	31
2.7.1	Gaussian Transform of the Experimental Data.	32
2.8	Estimation of Categorical Variables	33
3	Simulation Models of Physical Phenomena in Earth Sciences	37
3.1	Stochastic Simulation Models	37
3.2	Sequential Simulation Models	39

3.3	Sequential Gaussian Simulation	39
3.4	Direct Sequential Simulation from Experimental Distributions	40
3.4.1	Direct Sequential Simulation	41
3.4.2	Direct Sequential Co-simulation	42
3.4.3	Stochastic Sequential Co-simulation with Joint Probability Distributions	44
3.4.4	Stochastic Simulation with Uncertain Data: DSS with Point Probability Distributions	46
3.5	Simulation of Categorical Variables	47
3.5.1	Indicator Simulation	47
3.5.2	Alternative Simulation Methods for Categorical Variables	49
3.5.3	High-Order Stochastic Simulation of Categorical Variables	49
4	Integration of Geophysical Data for Reservoir Modeling and Characterization	51
4.1	Seismic Inversion	52
4.2	Bayesian Framework for Integrating Seismic Reflection Data into Subsurface Earth Models	54
4.3	Iterative Geostatistical Seismic Inversion Methodologies	56
4.3.1	Frequency Domain of Geostatistical Seismic Inversion	56
4.3.2	Trace-by-Trace Geostatistical Seismic Inversion Methodologies	57
4.3.3	Global Geostatistical Seismic Inversion Methodologies	58
4.3.4	Global Geostatistical Acoustic Inversion	60
4.3.5	Global Geostatistical Elastic Inversion	62
4.3.6	Geostatistical Seismic AVA Inversion	65
4.3.7	Application Example with Geostatistical Seismic AVA Inversion	72
4.3.8	Seismic Inversion with Structural Local Models	85
4.4	Integration of Low-Frequency Models into Geostatistical Seismic Inverse Methodologies	86
5	Deriving Petrophysical Properties with Seismic Inversion	91
5.1	Characterization of Petrophysical Properties Based on Acoustic and Velocity Models	91
5.2	Direct Inversion of Porosity Models	92
5.3	Geostatistical Seismic Inversion Directly for Petrophysical Properties	95
5.3.1	Geostatistical Seismic AVA Inversion to Facies	96
5.3.2	Application Examples with Geostatistical Seismic AVA Inversion Directly to Facies	99
5.4	Integration of Rock Physics Models into Geostatistical Seismic Inversion	106

6	Data Integration with Geostatistical Seismic Inversion Methodologies	109
6.1	Integration of Electromagnetic and Seismic Data into Geostatistical Simultaneous Inversion.	109
6.1.1	Application to a Synthetic Case Study	112
6.2	Integration of Dynamic Production Data: Global Inversion	116
6.2.1	Geostatistical History Matching.	117
6.2.2	Iterative Global Seismic Inversion in History Matching.	118
6.2.3	Selection of Petro-Elastic Models	120
6.2.4	Application to a Synthetic Case Study	122
6.2.5	Final Remarks.	129
7	Afterword	131
	References	133
	Index	139
