

Volcano dome deformation processes analysed with high resolution InSAR and camera-based techniques

by

Jacqueline T. Salzer

Cumulative Dissertation submitted in accordance with the
requirements for the degree of "Doctor rerum naturalium" (Dr. rer. nat.)

Faculty of Mathematics and Natural Sciences,
University of Potsdam

January 2017

List of Figures	xv
1 Introduction	1
1.1 Background and motivation	1
1.2 From dome deformation monitoring to process understanding	2
1.3 Goals of this thesis	6
1.4 Study areas	7
1.4.1 Volcán de Colima	7
1.4.2 Mount St. Helens	9
1.5 Methods	11
1.5.1 Satellite Interferometry	11
1.5.2 Digital Photogrammetry	14
1.6 Organization of the thesis	16
2 Satellite radar data reveal short-term pre-explosive displacements and a complex conduit system at Volcán de Colima, Mexico	19
Abstract	19
2.1 Introduction	20
2.2 Method	22
2.2.1 Data processing and generation of displacement maps	22
2.2.2 Source Modeling	23
2.3 Results	24
2.3.1 InSAR	24
2.3.2 Source Modeling	25
2.4 Discussion	28
2.4.1 Limitations	29
2.4.2 Implications	30
2.5 Conclusions	33
2.6 Acknowledgements & Funding	34
3 Volcano dome dynamics at Mount St. Helens: Deformation and intermittent subsidence monitored by seismicity and camera imagery pixel offsets	35
Abstract	35
3.1 Introduction	37

3.1.1	Overview	37
3.1.2	The 2004 - 2008 eruption of Mount St. Helens	37
3.1.3	Seismicity and deformation at Mount St. Helens	38
3.2	Data	39
3.2.1	Seismic network	39
3.2.2	Camera network	39
3.3	Methods	41
3.3.1	Digital Image Correlation (DIC)	41
3.3.2	Database compilation	41
3.3.3	Calculation of mean pixel displacement and spectral amplitudes	43
3.3.4	Calculation of 3D displacements	43
3.3.5	DIC time series	45
3.4	Results	46
3.4.1	Seismicity: differences between events	46
3.4.2	DIC results	47
3.4.3	Spectral amplitude relationships	49
3.4.4	Results of 3D calculations	52
3.5	Discussion	53
3.5.1	Data and method limitations	54
3.5.2	Earthquake and deformation processes	55
3.5.3	Conceptual model	59
3.5.4	Dome extrusion dynamics	60
3.6	Conclusions	61
3.7	Acknowledgments & Funding	61
4	Evaluating links between deformation, topography and surface temperature at volcanic domes: Results from a multi-sensor study at Volcán de Colima, Mexico	63
	Abstract	63
4.1	Introduction	65
4.2	Data and Methods	66
4.2.1	Data	66
4.2.2	Time series processing	67
4.2.3	Post-processing of MT-InSAR results	70
4.2.4	Infrared photogrammetry	70
4.3	Results	71
4.3.1	InSAR time series results and method comparison	71
4.3.2	Temporal Evolution of the deformation	73
4.3.3	Infrared results and comparison with MT-InSAR	74
4.3.4	Deformation and topography	77
4.4	Discussion	78
4.4.1	Limitations of InSAR time series methods	79
4.4.2	Accuracy and spatial resolution	79

4.4.3	Volcanological interpretation	80
4.5	Conclusions	84
4.6	Acknowledgements	84
5	Thesis Summary and Discussion	85
5.1	Summary	85
5.2	Implications and Outlook	86
5.2.1	Volcano dome deformation processes	86
5.2.2	The value of high resolution deformation data for understanding seismic signals	88
5.2.3	Detection of precursors and volcanic hazard assessment	89
5.2.4	Design of ground based volcano deformation monitoring networks	90
5.2.5	Systematic InSAR deformation measurements with current or future satellite missions	91
5.2.6	Further modelling and comparative studies	91
