<i>Preface</i>	v
<b>1. Problem of Using Industrial Waste: Wastes of Stone Crushing</b>	<b>1</b>
1.1 Problem of using industrial wastes in construction	1
1.2 Selecting the way of industrial waste use	4
1.3 Waste of stone crushing and ways for its application	7
1.4 Properties of stone crushing wastes	10
<b>2. Theoretical Provisions for Efficient Application of Stone Crushing Wastes in Concrete and Mortars</b>	<b>16</b>
2.1 Influence of dispersed mineral fillers on the structure formation of cement systems	16
2.2 Influence of mineral fillers on the properties of cement mortars and concrete	19
2.3 Ways of activating mineral fillers	21
2.4 Scientific hypothesis	23
<b>3. Fine-Grained Concrete Based on Stone Siftings</b>	<b>26</b>
3.1 General characteristics	26
3.2 Influence of granite filler on fine-grained concrete properties	28
3.3 Influence of granite filler dispersion on FGC properties	36
3.4 Composition design of fine-grained concrete with granite siftings	42
3.5 The effect of grain composition on FGC properties	49
3.6 FGC based on low-flowable mixtures	52
3.7 High strength FGC	54
3.8 Complex plasticizing admixtures for producing high-strength concrete on granite siftings	61
<b>4. Vibro-Pressed Fine Grained Concrete Based on Stone Siftings</b>	<b>70</b>
4.1 Technological background	70
4.2 Influence of granite filler grain composition on formation of vibro pressed fine-grained concrete structure	72
4.3 Influence of granite siftings on water demand, output coefficient and strength of vibro-pressed concrete	78
4.4 Effect of the fractions volume ratio in siftings on VFC properties	85
4.5 Influence of plasticizers and air entrained admixtures	90

4.6 Effect of heat treatment on VFC properties	94
4.7 Structure and properties of VFC determining its durability	98
4.8 Composition design of VFC with stone crushing siftings	104
<b>5. Macroporous Fine Grained Concrete Based on Stone Crushing Waste</b>	<b>108</b>
5.1 General features of macroporous concrete technology	108
5.2 Properties of macroporous concrete based on stone crushing siftings	110
<b>6. Normal-weight Concrete Based on Stone Siftings</b>	<b>116</b>
6.1 Influence of granite siftings on normal-weight concrete properties	116
6.2 Design of concrete compositions using stone crushing siftings	119
<b>7. Dry Construction Mixtures and Mortars on their Basis Using Aspiration Dust</b>	<b>123</b>
7.1 Aspiration granite dust as a possible disperse filler for mortars	123
7.2 Technological properties of mortar mixtures with filler (AGD)	125
7.3 Adhesion properties of mortars with AGD	128
7.4 Strength and deformation properties of modified mortars using AGD	133
7.5 Frost resistance of mortars with AGD	143
7.6 Design of mortars compositions with granite filler	148
