Contents

Introduction

Historical Development	1
Chemical Bonding and Crystal Structures	7
Definitions	13
The Data in the Tabulations	14
The Classification System	14
Summary of System	17
Periodicals	28

1. ELEMENTS (Metals and intermetallic alloys; metalloids and nonmetals; carbides, silicides, nitrides, phosphides)

1.A: Metals and Intermetallic Alloys	33
1.B: Metallic Carbides, Silicides, Nitrides and Phosphides	46
1.C: Metalloids and Nonmetals	50
1.D: Nonmetallic Carbides and Nitrides	54

2. SULFIDES and SULFOSALTS (sulfides, selenides, tellurides; arsenides, antimonides, bismuthides; sulfarsenites, sulfantimonites, sulfbismuthites, etc.)

Sulfides, etc.

2.A: Metal/metalloid alloys	56
2.B: Metal Sulfides, M:S > 1:1 (mainly 2:1)	61
2.C: Metal Sulfides, M:S = 1:1 (and similar)	75
2.D: Metal Sulfides, M:S = 3:4 and 2:3	93
2.E: Metal Sulfides, M:S ≤ 1:2	100
2.F: Sulfides of arsenic, alkalies; sulfides with halide, oxide, hydroxide, H ₂ O	110

Sulfosalts

2.G: Sulfarsenites, sulfantimonites, sulfbismuthites	118
2.H: Sulfosalts of SnS archetype	128
2.J: Sulfosalts of PbS archetype	140
2.K: Sulfarsenates	147

3. HALIDES

3.A: Simple halides, without H ₂ O	148
3.B: Simple halides, with H ₂ O	155
3.C: Complex halides	159
3.D: Oxyhalides, hydroxyhalides and related double halides	170

4. OXIDES (Hydroxides, V^[5,6] vanadates, arsenites, antimonites, bismuthites, sulfites, selenites, tellurites, iodates)

4.A: Metal:Oxygen = 2:1 and 1:1	182
4.B: Metal:Oxygen = 3:4 and similar	187
4.C: Metal:Oxygen = 2:3, 3:5, and similar	192
4.D: Metal:Oxygen = 1:2 and similar	203

4.E: Metal:Oxygen = < 1:2	229
4.F: Hydroxides (without V or U)	230
4.G: Uranyl Hydroxides	248
4.H: V ^[5,6] Vanadates	254
4.J: Arsenites, antimonites, bismuthites, sulfites, selenites, tellurites; iodates	262
4.K: Iodates	281

5. CARBONATES (+ NITRATES)

5.A: Carbonates without additional anions, without H ₂ O	284
5.B: Carbonates with additional anions, without H ₂ O	292
5.C: Carbonates without additional anions, with H ₂ O	303
5.D: Carbonates with additional anions, with H ₂ O	309
5.E: Uranyl Carbonates	318
5.N: NITRATES	324

6. BORATES

6.A: Monoborates	328
6.B: Diborates	338
6.C: Triborates	341
6.D: Tetraborates	345
6.E: Pentaborates	349
6.F: Hexaborates	354
6.G: Heptaborates and other megaborates	358
6.H: Unclassified borates	361

7. SULFATES (selenates, tellurates, chromates, molybdates, wolframates)

7.A: Sulfates (selenates, etc.) without additional anions, without H ₂ O	363
7.B: Sulfates (selenates, etc.) with additional anions, without H ₂ O	370
7.C: Sulfates (selenates, etc.) without additional anions, with H ₂ O	379
7.D: Sulfates (selenates, etc.) with additional anions, with H ₂ O	395
7.E: Uranyl sulfates	413
7.F: Chromates	415
7.G: Molybdates and wolframates	418
7.H: Uranium and uranyl molybdates and wolframates	422

8. PHOSPHATES, ARSENATES, VANADATES

8.A: Phosphates, etc. without additional anions, without H ₂ O	424
8.B: Phosphates, etc., with additional anions, without H ₂ O	439
8.C: Phosphates without additional anions, with H ₂ O	470
8.D: Phosphates, etc. with additional anions, with H ₂ O	491
8.E: Uranyl phosphates and arsenates	521
8.F: Polyphosphates, Polyarsenates, [4]-Polyvanadates	530

9. SILICATES (Germanates)

9.A: Nesosilicates	534
9.B: Sorosilicates	567
9.C: Cyclosilicates	594
9.D: Inosilicates	617
9.E: Phyllosilicates	657
9.F: Tektosilicates without zeolitic H ₂ O	691
9.G: Tektosilicates with zeolitic H ₂ O; zeolite family	701
9.H: Unclassified silicates	712
9.J: Germanates	716

10. ORGANIC COMPOUNDS

10.A: Salts of organic acids	717
10.B: Hydrocarbons	722
10.C: Miscellaneous Organic Minerals	724

Appendix (New minerals, structures, reclassification)	727
