

# Introduction to Finite Element Analysis and Design

**Nam-Ho Kim and Bhavani V. Sankar**

*Department of Mechanical & Aerospace Engineering  
College of Engineering, University of Florida*

**WILEY**

**John Wiley & Sons, Inc.**

*New York / Chichester / Weinheim / Brisbane / Singapore / Toronto*

# Contents

---

Preface vii

---

## Chapter 0. Mathematical Preliminaries 1

- 0.1. Vectors and Matrices 1
- 0.2. Vector-Matrix Calculus 3
- 0.3. Matrix Equations 8
- 0.4. Eigen Values and Eigen Vectors 8
- 0.5. Quadratic Forms 12
- 0.6. Maxima and Minima of Functions 13
- 0.7. Exercise 14

---

## Chapter 1. Stress-Strain Analysis 17

- 1.1. Stress 17
- 1.2. Strain 30
- 1.3. Stress-Strain Relations 35
- 1.4. Boundary Value Problems 39
- 1.5. Failure Theories 43
- 1.6. Safety Factor 49
- 1.7. Exercise 52

---

## Chapter 2. Uniaxial Bar and Truss Elements—Direct Method 60

- 2.1. Illustration of the Direct Method 61
- 2.2. Uniaxial Bar Element 66
- 2.3. Plane Truss Elements 73
- 2.4. Three-Dimensional Truss Elements (Space Truss) 83
- 2.5. Thermal Stresses 87
- 2.6. Projects 94
- 2.7. Exercise 98

---

## Chapter 3. Weighted Residual and Energy Methods for One-Dimensional Problems 108

- 3.1. Exact vs. Approximate Solution 108
- 3.2. Galerkin Method 109
- 3.3. Higher-Order Differential Equations 114
- 3.4. Finite Element Approximation 117
- 3.5. Formal Procedure 124
- 3.6. Energy Methods 129
- 3.7. Exercise 138

---

## Chapter 4. Finite Element Analysis of Beams and Frames 143

- 4.1. Review of Elementary Beam Theory 143
- 4.2. Rayleigh–Ritz Method 148
- 4.3. Finite Element Interpolation 153
- 4.4. Finite Element Equation for the Beam Element 158
- 4.5. Bending Moment and Shear Force Distribution 166
- 4.6. Plane Frame 171
- 4.7. Project 175
- 4.8. Exercise 176

---

## Chapter 5. Finite Elements for Heat Transfer Problems 185

- 5.1. Introduction 185
- 5.2. Fourier Heat Conduction Equation 186
- 5.3. Finite Element Analysis – Direct Method 188
- 5.4. Galerkin Method for Heat Conduction Problems 194
- 5.5. Convection Boundary Conditions 200
- 5.6. Exercise 207

---

## Chapter 6. Finite Elements for Plane Solids 211

- 6.1. Introduction 211
- 6.2. Types of Two-Dimensional Problems 211
- 6.3. Principle of Minimum Potential Energy 214
- 6.4. Constant Strain Triangular (CST) Element 216
- 6.5. Four-Node Rectangular Element 229
- 6.6. Four-Node Iso-Parametric Quadrilateral Element 237
- 6.7. Numerical Integration 248
- 6.8. Project 253
- 6.9. Exercise 254

---

## Chapter 7. Finite Element Procedures and Modeling 261

- 7.1. Finite Element Analysis Procedures 261
- 7.2. Finite Element Modeling Techniques 281

7.3. Project	291
7.4. Exercise	292

**Chapter 8. Structural Design Using Finite Elements 297**

---

8.1. Introduction	297
8.2. Safety Margin in Design	298
8.3. Intuitive Design: Fully-Stressed Design	301
8.4. Design Parameterization	304
8.5. Parameter Study – Sensitivity Analysis	307
8.6. Structural Optimization	313
8.7. Project: Design Optimization of a Bracket	325
8.8. Exercise	327

**Appendix A. Finite Element Analysis Using Pro/Engineer 333**

---

A.1. Introduction	333
A.2. Getting Start	333
A.3. Plate with a Hole Analysis	334
A.4. Design Sensitivity Analysis/Parameter Study	339
A.5. Design Optimization	341

**Appendix B. Finite Element Analysis Using NEI Nastran 343**

---

B.1. Introduction	343
B.2. Getting Start	343
B.3. Plate with a Hole Analysis	343
B.4. Static Analysis of Beams	350
B.5. Examples in the text	356

**Appendix C. Finite Element Analysis Using ANSYS 363**

---

C.1. Introduction	363
C.2. Getting Start	364
C.3. Static Analysis of a Corner Bracket	365
C.4. Examples in the Text	381

**Appendix D. Finite Element Analysis Using MATLAB Toolbox 391**

---

D.1. Finite Element Analysis of Bar and Truss	391
D.2. Finite Element Analysis Using Frame Elements	403
D.3. Finite Element Analysis Using Plane Solid Elements	408

Index	417
