

Meinhard T. Schobeiri

Fluid Mechanics for Engineers

A Graduate Textbook

 Springer

Contents

1	Introduction	1
1.1	Continuum Hypothesis	1
1.2	Molecular Viscosity	2
1.3	Flow Classification	4
1.3.1	Velocity Pattern: Laminar, Intermittent, Turbulent Flow	4
1.3.2	Change of Density, Incompressible, Compressible Flow	8
1.3.3	Statistically Steady Flow, Unsteady Flow	9
1.4	Shear-Deformation Behavior of Fluids	9
	References	10
2	Vector and Tensor Analysis, Applications to Fluid Mechanics	11
2.1	Tensors in Three-Dimensional Euclidean Space	11
2.1.1	Index Notation	12
2.2	Vector Operations: Scalar, Vector and Tensor Products	13
2.2.1	Scalar Product	13
2.2.2	Vector or Cross Product	13
2.2.3	Tensor Product	14
2.3	Contraction of Tensors	15
2.4	Differential Operators in Fluid Mechanics	15
2.4.1	Substantial Derivatives	16
2.4.2	Differential Operator ∇	16
2.5	Operator ∇ Applied to Different Functions	19
2.5.1	Scalar Product of ∇ and V	19
2.5.2	Vector Product $\nabla \times V$	20
2.5.3	Tensor Product of ∇ and V	21
2.5.4	Scalar Product of ∇ and a Second Order Tensor	21
2.5.5	Eigenvalue and Eigenvector of a Second Order Tensor	25
	Problems	27
	References	29

3	Kinematics of Fluid Motion	31
3.1	Material and Spatial Description of the Flow Field	31
3.1.1	Material Description	31
3.1.2	Jacobian Transformation Function and Its Material Derivative	32
3.1.3	Velocity, Acceleration of Material Points	36
3.1.4	Spatial Description	37
3.2	Translation, Deformation, Rotation	38
3.3	Reynolds Transport Theorem	42
3.4	Pathline, Streamline, Streakline	44
	Problems	46
	References	49
4	Differential Balances in Fluid Mechanics	51
4.1	Mass Flow Balance in Stationary Frame of Reference	51
4.1.1	Incompressibility Condition	53
4.2	Differential Momentum Balance in Stationary Frame of Reference	53
4.2.1	Relationship between Stress Tensor and Deformation Tensor	56
4.2.2	Navier-Stokes Equation of Motion	58
4.2.3	Special Case: Euler Equation of Motion	60
4.3	Some Discussions on Navier-Stokes Equations	63
4.4	Energy Balance in Stationary Frame of Reference	64
4.4.1	Mechanical Energy	64
4.4.2	Thermal Energy Balance	67
4.4.3	Total Energy	70
4.4.4	Entropy Balance	71
4.5	Differential Balances in Rotating Frame of Reference	72
4.5.1	Velocity and Acceleration in Rotating Frame	72
4.5.2	Continuity Equation in Rotating Frame of Reference	73
4.5.3	Equation of Motion in Rotating Frame of Reference	74
4.5.4	Energy Equation in Rotating Frame of Reference	76
	Problems	78
	References	80
5	Integral Balances in Fluid Mechanics	81
5.1	Mass Flow Balance	81
5.2	Balance of Linear Momentum	83
5.3	Balance of Moment of Momentum	88
5.4	Balance of Energy	94

5.4.1	Energy Balance Special Case 1: Steady Flow	99
5.4.2	Energy Balance Special Case 2: Steady Flow, Constant Mass Flow	99
5.5	Application of Energy Balance to Engineering Components	100
5.5.1	Application: Pipe, Diffuser, Nozzle	100
5.5.2	Application: Combustion Chamber	101
5.5.3	Application: Turbo-shafts, Energy Extraction, Consumption	102
5.5.3.1	Uncooled Turbine	103
5.5.3.2	Cooled Turbine	104
5.5.3.3	Uncooled Compressor	105
5.6	Irreversibility, Entropy Increase, Total Pressure Loss	106
5.6.1	Application of Second Law to Engineering Components	107
5.7	Theory of Thermal Turbomachinery Stages	110
5.7.1	Energy Transfer in Turbomachinery Stages	110
5.7.2	Energy Transfer in Relative Systems	111
5.7.3	Unified Treatment of Turbine and Compressor Stages	112
5.8	Dimensionless Stage Parameters	115
5.8.1	Simple Radial Equilibrium to Determine r	117
5.8.2	Effect of Degree of Reaction on the Stage Configuration	121
5.8.3	Effect of Stage Load Coefficient on Stage Power	121
5.9	Unified Description of a Turbomachinery Stage	122
5.9.1	Unified Description of Stage with Constant Mean Diameter	123
5.10	Turbine and Compressor Cascade Flow Forces	124
5.10.1	Blade Force in an Inviscid Flow Field	124
5.10.2	Blade Forces in a Viscous Flow Field	128
5.10.3	Effect of Solidity on Blade Profile Losses	134
	Problems, Project	135
	References	138
6	Inviscid Flows	139
6.1	Incompressible Potential Flows	141
6.2	Complex Potential for Plane Flows	142
6.2.1	Elements of Potential Flow	145
6.2.1.1	Translational Flows	145
6.2.1.2	Sources and Sinks	146
6.2.1.3	Potential Vortex	146
6.2.1.4	Dipole Flow	147
6.2.1.5	Corner Flow	149
6.3	Superposition of Potential Flow Elements	150

6.3.1	Superposition of a Uniform Flow and a Source	150
6.3.2	Superposition of a Translational Flow and a Dipole	151
6.3.3	Superposition of a Translational Flow, a Dipole and a Vortex	154
6.3.4	Superposition of a Uniform Flow, Source, and Sink	159
6.3.5	Superposition of a Source and a Vortex	160
6.4	Blasius Theorem	161
6.5	Kutta-Joukowski Theorem	163
6.6	Conformal Transformation	167
6.6.1	Conformal Transformation, Basic Principles	167
6.6.2	Kutta-Joukowski Transformation	169
6.6.3	Joukowski Transformation	170
6.6.3.1	Circle-Flat Plate Transformation	171
6.6.3.2	Circle-Ellipse Transformation	172
6.6.3.3	Circle-Symmetric Airfoil Transformation	172
6.6.3.4	Circle-Cambered Airfoil Transformation	173
6.6.3.5	Circulation, Lift, Kutta Condition	175
6.7	Vortex Theorems	179
6.7.1	Thomson Theorem	179
6.7.2	Generation of Circulation	184
6.7.3	Helmholtz Theorems	185
6.7.4	Vortex Induced Velocity Field, Law of Biot-Savart	190
6.7.5	Induced Drag Force	195
	Problems	197
	References	198
7	Viscous Laminar Flow	201
7.1	Steady Viscous Flow through a Curved Channel	201
7.1.1	Conservation Laws	202
7.1.2	Solution of the Navier-Stokes Equation	205
7.1.3	Curved Channel, Negative Pressure Gradient	207
7.1.4	Curved Channel, Positive Pressure Gradient	208
7.1.5	Radial Flow, Positive Pressure Gradient	209
7.2	Temperature Distribution	210
7.2.1	Solution of Energy Equation	211
7.2.2	Curved Channel, Negative Pressure Gradient	213
7.2.3	Curved Channel, Positive Pressure Gradient	213
7.2.4	Radial Flow, Positive Pressure Gradient	214
7.3	Steady Parallel Flows	216
7.3.1	Couette Flow between Two Parallel Walls	216

7.3.2	Couette Flow between Two Concentric Cylinders	218
7.3.3	Hagen-Poiseuille Flow	220
7.4	Unsteady Laminar Flows	222
7.4.1	Flow Near Oscillating Flat Plate, Stokes-Rayleigh Problem	223
7.4.2	Influence of Viscosity on Vortex Decay	226
	Problems	228
	References	232
8	Laminar-Turbulent Transition	233
8.1	Stability of Laminar Flow	233
8.2	Laminar-Turbulent Transition	234
8.3	Stability of Laminar Flows	237
8.3.1	Stability of Small Disturbances	237
8.3.2	The Orr-Sommerfeld Stability Equation	239
8.3.3	Orr-Sommerfeld Eigenvalue Problem	241
8.3.4	Solution of Orr-Sommerfeld Equation	243
8.3.5	Numerical Results	246
8.4	Physics of an Intermittent Flow, Transition	247
8.4.1	Identification of Intermittent Behavior of Statistically Steady Flows	249
8.4.2	Turbulent/non-turbulent Decisions	250
8.4.3	Intermittency Modeling for Steady Flow at Zero Pressure Gradient	253
8.4.4	Identification of Intermittent Behavior of Periodic Unsteady Flows	255
8.4.5	Intermittency Modeling for Periodic Unsteady Flow	258
8.5	Implementation of Intermittency into Navier Stokes Equations	261
8.5.1	Reynolds-Averaged Equations for Fully Turbulent Flow	261
8.5.2	Intermittency Implementation in RANS	265
	Problems	267
	References	268
9	Turbulent Flow, Modeling	271
9.1	Fundamentals of Turbulent Flows	271
9.1.1	Type of Turbulence	273
9.1.2	Correlations, Length and Time Scales	274
9.1.3	Spectral Representation of Turbulent Flows	281
9.1.4	Spectral Tensor, Energy Spectral Function	284
9.2	Averaging Fundamental Equations of Turbulent Flow	286

9.2.1	Averaging Conservation Equations	287
9.2.1.1	Averaging the Continuity Equation	287
9.2.1.2	Averaging the Navier-Stokes Equation	287
9.2.1.3	Averaging the Mechanical Energy Equation	288
9.2.1.4	Averaging the Thermal Energy Equation	289
9.2.1.5	Averaging the Total Enthalpy Equation	291
9.2.1.6	Quantities Resulting from Averaging to be Modeled	294
9.2.2	Equation of Turbulence Kinetic Energy	296
9.2.3	Equation of Dissipation of Kinetic Energy	302
9.3	Turbulence Modeling	303
9.3.1	Algebraic Model: Prandtl Mixing Length Hypothesis	304
9.3.2	Algebraic Model: Cebeci-Smith Model	310
9.3.3	Baldwin-Lomax Algebraic Model	311
9.3.4	One- Equation Model by Prandtl	312
9.3.5	Two-Equation Models	313
9.3.5.1	Two-Equation k - ϵ Model	313
9.3.5.2	Two-Equation k - ω -Model	315
9.3.5.3	Two-Equation k - ω -SST-Model	316
9.3.5.4	Two Examples of Two-Equation Models	318
9.4	Grid Turbulence	321
	Problems and Projects	323
	References	325
10	Free Turbulent Flow	327
10.1	Types of Free Turbulent Flows	327
10.2	Fundamentals Equations of Free Turbulent Flows	328
10.3	Free Turbulent Flows at Zero-Pressure Gradient	329
10.3.1	Plane Free Jet Flows	333
10.3.2	Straight Wake at Zero Pressure Gradient	333
10.3.3	Free Jet Boundary	338
10.4	Wake Flow at Non-zero Lateral Pressure Gradient	340
10.4.1	Wake Flow in Engineering, Applications, General Remarks	340
10.4.2	Theoretical Concept, an Inductive Approach	344
10.4.3	Nondimensional Parameters	347
10.4.4	Near Wake, Far Wake Regions	349
10.4.5	Utilizing the Wake Characteristics	350
	Computational Projects	355
	References	356

11 Boundary Layer Theory	357
11.1 Boundary Layer Approximations	358
11.2 Exact Solutions of Laminar Boundary Layer Equations	361
11.2.1 Laminar Boundary Layer, Flat Plate	362
11.2.2 Wedge Flows	364
11.2.3 Polhausen Approximate Solution	368
11.3 Boundary Layer Theory Integral Method	369
11.3.1 Boundary Layer Thicknesses	369
11.3.2 Boundary Layer Integral Equation	372
11.4 Turbulent Boundary Layers	375
11.4.1 Universal Wall Functions	378
11.4.2 Velocity Defect Function	381
11.5 Boundary Layer, Differential Treatment	386
11.5.1 Solution of Boundary Layer Equations	390
11.6 Measurement of Boundary Flow, Basic Techniques	391
11.6.1 Experimental Techniques	391
11.6.1.1 HWA Operation Modes, Calibration	391
11.6.1.2 HWA Averaging, Sampling Data	393
11.7 Examples: Calculations, Experiments	394
11.7.1 Steady State Velocity Calculations	394
11.7.1.1 Experimental Verification	396
11.7.1.2 Heat Transfer Calculation, Experiment	397
11.7.2 Periodic Unsteady Inlet Flow Condition	398
11.7.2.1 Experimental Verification	401
11.7.2.2 Heat Transfer Calculation, Experiment	403
11.7.3 Application of κ - ω Model to Boundary Layer	404
11.8 Parameters Affecting Boundary Layer	404
11.8.1 Parameter Variations, General Remarks	405
11.8.2 Effect of Periodic Unsteady Flow	409
Problems and Projects	417
References	418
12 Compressible Flow	423
12.1 Steady Compressible Flow	423
12.1.1 Speed of Sound, Mach Number	423
12.1.2 Fluid Density, Mach Number, Critical State	425
12.1.3 Effect of Cross-Section Change on Mach Number	430
12.1.3.1 Flow through Channels with Constant Area	437
12.1.3.2 The Normal Shock Wave Relations	445

12.1.4	Supersonic Flow	450
12.1.4.1	The Oblique Shock Wave Relations	451
12.1.4.2	Detached Shock Wave	454
12.1.4.3	Prandtl-Meyer Expansion	456
12.2	Unsteady Compressible Flow	458
12.2.1	One-dimensional Approximation	459
12.3	Numerical Treatment	466
12.3.1	Unsteady Compressible Flow: Example: Shock Tube	467
12.3.2	Shock Tube Dynamic Behavior	468
12.3.2.1	Pressure Transients	468
12.3.2.2	Temperature Transients	469
12.3.2.3	Mass Flow Transients	470
	Problems and Projects	471
