

Benjamin Blumenstein

**Sustainable Intensification of Organic and Low-Input Agriculture
through Integrated Bioenergy Production**

System Analysis, Economic Implications, and Risk Assessment

Table of contents

Tables.....	IX
Figures	XI
Abbreviations	XV
1 Introduction.....	16
1.1 Sustainable agriculture and <i>sustainable intensification</i>	17
1.1.1 Describing the concepts	17
1.1.2 <i>Intensification</i> or <i>optimization</i> ?	18
1.2 Research objectives.....	21
2 Integrated bioenergy and food production — a German survey on structure and developments of anaerobic digestion in organic farming systems	23
2.1 Introduction	23
2.1.1 Biogas systems.....	24
2.1.2 Biogas production in organic agriculture	26
2.2 Methods	28
2.3 Results	30
2.3.1 Reasons for biogas production in organic agriculture	30
2.3.2 Structure of organic biogas production	31
2.3.3 Integrated view on farm structure and biogas production.....	33
2.3.4 Biomass input in organic biogas plants	35
2.3.5 Agronomic use and effects of fermentation residues (digestate)	38
2.4 Discussion.....	39
2.4.1 Energy potential of organic biogas.....	39
2.4.2 Sustainability of biogas production associated with organic farming systems	41

2.5	Conclusions and outlook	45
3	Farm biogas production in organic agriculture: system implications	47
3.1	Introduction	47
3.1.1	Biogas systems.....	47
3.1.2	Organic farming systems	49
3.1.3	Biogas in organic farming	51
3.1.4	Objectives and approach.....	53
3.2	Methods	54
3.3	Systems description	55
3.3.1	Organic mixed farm	55
3.3.2	Organic mixed farm with biogas.....	58
3.4	Agronomical effects of biogas integration.....	61
3.4.1	Nitrogen dynamics.....	61
3.4.2	Crop yield.....	64
3.4.3	Product quality	66
3.4.4	Crop rotations.....	66
3.4.5	Weeds.....	67
3.4.6	Plant health	67
3.4.7	Soil fertility.....	68
3.5	Discussion of system implications.....	71
3.5.1	Premises for an eco-functional intensification.....	73
3.5.2	Research and development needs	74
3.6	Conclusions	75
4	Economics of anaerobic digestion in organic agriculture: between system constraints and policy regulations	77
4.1	Introduction	77

4.1.1	Research objectives	77
4.1.2	Biogas in organic agriculture	78
4.2	Methods	81
4.2.1	Model plant sizes and feeding practices	82
4.2.2	Technical parameters	83
4.2.3	Economic parameters.....	85
4.2.4	Economic simulation model	88
4.3	Results and discussion	89
4.3.1	Investment and operating costs.....	89
4.3.2	Profitability.....	91
4.3.3	Sensitivity analysis	95
4.3.4	Break-even analysis	99
4.3.5	Alternative evaluation approaches for organic AD systems	104
4.4	Conclusions	108
5	A case of sustainable intensification: Stochastic farm budget optimization considering internal economic benefits of biogas production in organic agriculture.....	110
5.1	Introduction	110
5.1.1	Research objectives.....	112
5.1.2	Agronomic implications of integrated AD for organic farm systems	112
5.2	Methods	116
5.2.1	Farm models	117
5.2.2	Crop rotation	118
5.2.3	Nitrogen model.....	119
5.2.4	Determination of yields.....	120
5.2.5	Economic model.....	121
5.2.6	EcoSys: Model implementation.....	123

5.3	Results and discussion	126
5.3.1	Mean nitrogen availability and net yields	126
5.3.2	Labor and machinery costs	127
5.3.3	Risk analysis	129
5.3.4	Farm system economics	131
5.3.5	Validation of model outcomes	134
5.3.6	Alternative scenarios	135
5.3.7	Model restrictions and further research	137
5.4	Conclusions	138
6	Economic assessment of the integrated generation of solid fuel and biogas from biomass (IFBB) in comparison to different energy recovery, animal-based and non-refining management systems	140
6.1	Introduction	140
6.2	Materials and methods	142
6.2.1	Biomass feedstock	144
6.2.2	Economic simulation model	145
6.2.3	Sensitivity analysis	146
6.2.4	Framework assumptions	146
6.2.5	Systems descriptions	147
6.3	Results and discussion	151
6.3.1	Economic comparison	151
6.3.2	Sensitivity analysis	154
6.3.3	Subsumption of results	161
6.4	Conclusions	162

7	Synopsis.....	163
7.1	Pushing the boundaries	163
7.2	<i>Intensification</i> or <i>optimization</i> – only a matter of perspective?	165
7.3	Socio-economic implications of integrated bioenergy production and their link to <i>sustainable intensification</i>	169
7.3.1	Socio-economic benefits and challenges on farm and societal levels	170
7.3.2	Societal backing for integrated bioenergy production.....	171
7.3.3	Risk potentials of integrated bioenergy production	172
7.4	Strengthening the socio-economic dimension of <i>sustainable intensification</i>	173
8	General conclusions and research needs.....	175
9	Summary.....	179
10	References.....	182
