List of Figures xii
List of Tables xii

PART I RISK ASSESSMENT 1

1 Preliminary concepts on quantitative risk measurement 3
  1.1 Risk measurement - Theory 3
  1.1.1 First definitions 3
  1.1.2 Properties for risk measures 14
  1.2 Risk measurement - Practice 16
  1.2.1 'Liability side' versus 'asset side' perspectives 17
  1.2.2 Some misunderstandings to be avoided in practice 20
  1.3 Exercises 26

2 Data on losses for risk evaluation 29
  2.1 An example on three dimensional data 29
  2.2 Basic graphical analysis of the loss severity distributions 31
  2.3 Quantile estimation 33
  2.4 Examples 33

3 A family of distortion risk measures 35
  3.1 Overview on risk measures 37
  3.2 Distortion risk measures 38
  3.3 A new family of risk measures: GlueVaR 40
  3.4 Linear combination of risk measures 41
3.5 Subadditivity ............................................. 43
3.6 Concavity of the distortion function .................. 44
3.7 Example of risk measurement with GlueVaR .......... 45
3.8 Exercises ................................................. 48

4 GlueVaR and other new risk measures .................. 51
4.1 Analytical closed-form expressions of GlueVaR ........ 51
4.1.1 Illustration: GlueVaR expression for Student $t$ distribution ......................... 51
4.1.2 Analytical expressions for other frequently used distributions ...................... 52
4.1.3 The Cornish-Fisher approximation of GlueVaR .................................. 54
4.2 On the relationship between GlueVaR and Tail Distortion risk measures ............... 56
4.3 On the relationship between GlueVaR and RVaR risk measures .......................... 57
4.4 Example .................................................. 60
4.5 Exercises ................................................. 63

5 Risk measure choice ........................................ 65
5.1 Aggregate attitude towards risk ........................ 66
5.1.1 Local risk attitude ................................... 70
5.2 Application of risk assessment in a scenario involving catastrophic losses ........... 76
5.2.1 Calibration of GlueVaR parameters .................. 77
5.2.2 Data and Results ..................................... 78
5.3 GlueVaR to reflect risk attitudes ......................... 81
5.4 Exercises ................................................. 82

PART II CAPITAL ALLOCATION PROBLEMS ................. 83

6 An overview on capital allocation problems .............. 85
6.1 Main concepts and notation ................................ 85
6.2 Properties of capital allocation principles .......... 89
6.3 Review of some principles .............................. 91
6.3.1 The gradient allocation principle .................. 91
6.3.2 Other capital allocation principles based on partial contributions .................. 101
6.3.3 The excess based allocation principle ............... 106
