Nonlinear Programming Techniques for Equilibria

 Springer

Contents

1	Equilibrium Models and Applications	1
1.1	Obstacle Problem	1
1.2	Power Control in Wireless Communications	3
1.3	Traffic Network	4
1.4	Portfolio Selection	6
1.5	Optimal Production Under Restricted Resources	7
1.6	Input-Output Analysis in an Economy	8
1.7	Quality Control in Production Systems	10
1.8	Ky Fan Inequalities: A Unifying Equilibrium Model	11
1.9	Notes and References	16
2	Theory for Equilibria	17
2.1	Convexity and Monotonicity	17
2.2	Equivalent Reformulations	24
2.3	Existence	31
2.4	Stability	39
2.5	Error Bounds	43
2.6	Notes and References	47
3	Algorithms for Equilibria	51
3.1	Fixed-Point and Extragradient Methods	51
3.2	Descent Methods	59
3.3	Regularization Methods	65
3.4	Computational Issues	68
3.5	Notes and References	69
4	Quasi-Equilibria	73
4.1	Applications	73
4.2	Theory	75
4.3	Algorithms	80
4.4	Notes and References	96

A Mathematical Background	99
A.1 Topological Concepts	99
A.2 Functions.....	103
A.3 Multivalued Maps	108
References	113
Index	119
