Stochastic Programming

Modeling Decision Problems
Under Uncertainty

Contents

1	Introduction	1
1.1	Linear Programming with Random Parameters	1
1.2	Examples	2
1.2.1	Blending Problem	3
1.2.2	Production Planning	6
1.2.3	Portfolio Optimization	9
2	Random Objective Functions	13
2.1	Maximization of Expected Utility	13
2.1.1	Specifying Utility Functions	17
2.2	The Mean-Variance Model	19
2.2.1	Relation with Expected Utility Theory	20
3	Recourse Models	23
3.1	Models with Penalty Costs in Deterministic LP	23
3.1.1	Individual Penalty Costs	24
3.1.2	Refined Individual Penalty Costs	25
3.1.3	Joint Penalty Costs	25
3.1.4	Penalty Costs Based on Recourse Actions	25
3.2	Recourse Models in Stochastic Linear Programming	27
3.2.1	Representations of Recourse Models	27
3.2.2	Modeling Aspects	31
3.2.3	Special Recourse Structures	32
3.3	Properties of Recourse Models	35
3.3.1	Fixed Recourse	35
3.3.2	Simple Recourse	38
3.3.3	Expected Shortage and Surplus Functions	40
3.3.4	Bounds on the Optimal Value of the Recourse Model	49
3.3.5	Approximation of Distributions	51
3.4	Algorithms for Recourse Models	53
3.4.1	Simple Recourse	54
3.4.2	Fixed Recourse	60

4 Stochastic Mixed-Integer Programming	67
4.1 Mixed-Integer Recourse Models	67
4.1.1 Special Mixed-Integer Recourse Structures	70
4.2 Properties of Mixed-Integer Recourse Models	72
4.2.1 Fixed Mixed-Integer Recourse	72
4.2.2 Simple Integer Recourse	75
4.2.3 Integer Simple Recourse: Its One-Dimensional Functions	77
4.3 Algorithms for Mixed-Integer Recourse Models	93
4.3.1 Simple Integer Recourse	93
4.3.2 General Mixed-Integer Recourse	103
5 Chance Constraints	115
5.1 Modeling with Chance Constraints	115
5.2 Mathematical Properties of Chance Constraints	118
5.2.1 Different Representations of the Reliability Function	118
5.2.2 Examples of Chance Constraints	119
5.2.3 Properties of Chance Constraints	125
5.3 Discrete Distributions	130
5.4 Algorithms for Models with a Joint Chance Constraint	132
5.4.1 Evaluation of the Distribution Function of a Multivariate Normal Distribution	133
6 Integrated Chance Constraints	139
6.1 Modeling with Integrated Chance Constraints	139
6.2 Single Integrated Chance Constraint	141
6.2.1 Formulations of Single Integrated Chance Constraints	141
6.2.2 Examples of Single Integrated Chance Constraints	142
6.2.3 Properties of Single Integrated Chance Constraints	145
6.2.4 Discrete Distributions	150
6.3 Joint Integrated Chance Constraints	153
6.4 Conditional Surplus-at-Risk and Integrated Chance Constraints	154
6.5 Integrated Chance Constraints and Recourse Models	156
6.5.1 Conclusions	158
6.6 Algorithms for Models with Integrated Chance Constraints	159
7 Assignments	163
7.1 A1: Multiperiod Inventory Control	163
7.2 R1: Probabilistic Interpretations of Integrals of Distribution Functions	165
7.3 R2: Complete and Sufficiently Expensive Recourse	166
7.3.1 Finiteness of the Function v	167
7.3.2 Sufficiently Expensive Recourse	167
7.3.3 Convexity and Differentiability	168
7.4 R3: Simple Recourse, Only RHS Random	168

7.5	R4: Workforce Level Planning: An Example of Multiple Simple Recourse?.....	170
7.6	C1: Chance Constraints and Integrated Chance Constraints.....	171
7.7	C2: The Expected Shortage Function for Positive Random Variables	172
7.8	C3: Convexity for a Simple Chance Constraint	173
7.9	C4: Relation Individual and Joint Chance Constraints.....	173
7.10	C5: Joint Chance Constraints, Only RHS Random, Discrete Distribution	175
7.11	C6: Individual Chance Constraints with One Random Variable	176
7.12	U1: Stochastic Dominance and Expected Utility	177
8	Case Studies	181
8.1	Multi-Period Production Planning	181
8.2	Water Management in the Bodrog River Area	185
8.3	Budgeting Cost of Nursing in a Hospital	187
8.4	Growing Maize and Sorghum in Kilosa District	192
8.5	Product Mix Problem.....	195
8.6	Investment Planning for Electricity Generation	197
8.7	Optimizing the Timetable of the Haarlem–Maastricht Railway Connection	201
8.8	Electricity Distribution	204
8.8.1	Contract with Power Plants	205
8.8.2	Contract with Small Generators	206
8.8.3	Modeling Uncertain Demand for Electricity	207
8.8.4	Model 1: Optimizing the Contract with the Power Plants ...	208
8.8.5	Model 2: Supply Schedule for the Next Day	209
8.8.6	Future Demand for Supply from Small Generators.....	210
8.8.7	Modeling Expected Penalty Costs	211
8.8.8	Optimal Supply Schedules	212
A	Probability	213
A.1	Expected Functions	213
A.2	Limit Sets	217
A.3	Probability Distribution and Density Functions	218
B	Elementary Convex Analysis	221
C	Deterministic LP	231
D	Maximum Calculus	235

E Algorithms for Convex Non-linear Optimization	237
E.1 Frank and Wolfe's Algorithm	238
E.2 Veinott's Supporting Hyperplane Method	239
Bibliography	243
Index	247
