# Contents

*Preface*  
*Acknowledgments*  

**Part I  Basics**  

1 Economics and Econophysics  
1.1 Physics  
1.2 Economics  
1.3 Econophysics  
1.4 Physics, Reality, and the Natural World  
1.5 Economics, Reality, and the Real World  
1.6 Econophysics and the Empirical World  

2 Measuring the Income Distribution  
2.1 Basic Definitions and Results  
2.2 Two-Components Distribution  
2.3 Income Distribution Functions  
2.4 Empirical Evidence  
2.5 Limitations of Curve Fitting  

3 Piketty's *Capital in the Twenty-First Century*  
3.1 Data-Driven Analysis  
3.2 Phenomenology  
3.3 Pluralistic Economic Theory  
3.4 Fundamental Laws of Capitalism  
3.5 The Mechanisms for Rising Inequality  
3.6 Summary of the Main Results  
3.7 Econophysics after Piketty  

---

vii
Part II Statistical Econophysics

4 Stochastic Dynamics of Income and Wealth
  4.1 Uncertainty and Risk in Physics and Economics
  4.2 Kinetic Models of Income and Wealth Distribution
  4.3 Political Economy
  4.4 Class Redistribution
  4.5 Econophysics of Income Distribution and Piketty

Part III Economic Cycles

5 Circular Flows in Economic Systems
  5.1 Economic Growth and Trade Cycles
  5.2 Uncertainty, Confidence, Investment, and Instability
  5.3 The Goodwin Growth-Cycle Macroeconomic Dynamics
  5.4 Empirical Evidence of the Goodwin Macrodynamics
  5.5 Conclusions

6 Goodwin-Type Distributive Macrodynamics
  6.1 Structural Stability
  6.2 Cyclic Evolution in the Tsallis Distribution
  6.3 The Boyd–Blatt Model
  6.4 The Keen Model
  6.5 Other Extensions of the Goodwin Model
