

RIJKSUNIVERSITEIT GRONINGEN

Sustainable energy for developing countries:

Modelling transitions to renewable and clean energy
in rapidly developing countries

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
vrijdag 27 februari 2009
om 16.15 uur

door

Frauke Urban

geboren op 10 juli 1980

te Bremen, Duitsland

Contents

1.	General introduction	11
1.1	Introduction.....	11
1.2	Impacts of energy use	11
1.3	Sustainable development, equity in the climate change debate and the role of technology leapfrogging	12
1.4	Energy transitions and the role of renewable and clean energy.....	15
1.5	Energy modelling.....	17
1.6	Aim and scope of the thesis	18
1.7	Structure of the thesis.....	20
2.	Modelling energy and development: an evaluation of models and concepts	22
	Abstract	22
2.1	Introduction.....	22
2.1.1	Metrics for the comparison of economic activity	23
2.2	Developing countries in global energy models.....	24
2.2.1	The Energy Ladder in the SRES models	24
2.2.2	The Environmental Kuznets Curve in the SRES models.....	27
2.3	Key issues of energy systems in developing countries.....	29
2.3.1	Developments in the energy system	31
2.3.1.1	From traditional to commercial fuels.....	31
2.3.1.2	Electrification.....	33
2.3.2	From economic development to energy use	35
2.3.2.1	Economic structural change and dematerialisation.....	35
2.3.2.2	Income distribution	38
2.3.2.3	Informal economic systems	39
2.3.3	The context of development.....	41
2.3.3.1	Fossil energy resource depletion.....	41
2.3.3.2	Climate change.....	41
2.3.3.3	Urban air pollution.....	42
2.4	Discussion and conclusion.....	42
2.5	Acknowledgements.....	43
3.	Modelling energy systems for developing countries	44
	Abstract	44
3.1	Introduction.....	44
3.2	Characteristics of the energy systems and economies of developing countries ...	45
3.2.1	Poor performance of the power sector and traditional fuels	45
3.2.2	Transitions from traditional to modern economies	47
3.2.3	Structural deficiencies in society, economy and energy systems	48
3.3	Energy model comparison	48
3.4	Results of the energy model comparison	50
3.5	Discussion.....	52
3.5.1	Discussion of model comparison and model groups	52
3.5.2	Discussion of methodology.....	54
3.6	Conclusions.....	55
3.7	Acknowledgements.....	56

4.	Renewable and low-carbon energy as mitigation options of climate change for China's power sector.....	57
	Abstract.....	57
4.1	Introduction.....	57
4.2	Method.....	58
4.2.1	Description of PowerPlan.....	58
4.2.2	Modelling the Chinese power sector.....	60
4.2.3	Story-lines and scenario-making.....	61
4.3	Results.....	63
4.3.1	Results of the business-as-usual scenarios.....	63
4.3.2	Results of the renewable and low-carbon energy scenarios.....	64
4.3.3	Comparison of the scenarios.....	65
4.4	Discussion.....	68
4.4.1	Discussion of the method.....	68
4.4.2	Discussion of the results and implications.....	68
4.5	Conclusion.....	70
4.6	Acknowledgements.....	71
5.	Scenarios for renewable energy transitions in Beijing.....	72
	Abstract.....	72
5.1	Introduction.....	72
5.2	Methodology.....	73
5.2.1	Modelling with LEAP.....	73
5.2.1.1	Final energy demand analysis.....	74
5.2.1.2	Activity levels, energy intensity, emissions and demand costs.....	74
5.2.2	Modelling framework for Beijing.....	75
5.2.2.1	Beijing.....	75
5.2.2.2	Modelling the system.....	77
5.2.3	Scenario-making.....	79
5.2.4	Data issues.....	80
5.3	Results.....	81
5.3.1	Energy demand.....	81
5.3.2	CO ₂ and other greenhouse gas emissions.....	84
5.3.3	Costs.....	85
5.3.4	Technology and policy implications.....	86
5.4	Discussion.....	89
5.4.1	Discussion of the method and data.....	89
5.4.2	Uncertainties.....	89
5.4.3	Discussion of the results.....	90
5.4.4	Recommendations.....	92
5.5	Conclusions.....	93
5.6	Acknowledgements.....	94
6.	Energy for rural India.....	95
	Abstract.....	95
6.1	Introduction.....	95
6.2	Methodology.....	98
6.2.1	Modelling with the Regional Energy Model REM.....	98

6.2.2	Modelling rural India	98
6.2.3	Scenario-making	101
6.2.4	Data issues	103
6.3	Results.....	103
6.3.1	Primary energy use	103
6.3.2	GHG emissions	105
6.3.3	Costs.....	106
6.4	Discussion.....	108
6.4.1	Discussion of method and data	108
6.4.2	Uncertainties	108
6.4.3	Discussion of results	109
6.4.4	Policy recommendations.....	111
6.5	Conclusions.....	112
6.6	Acknowledgements.....	112
7.	Conclusions.....	113
7.1	Introduction.....	113
7.2	Energy systems of developing countries: characteristics and potential changes	113
7.3	Energy transitions in rapidly developing countries	114
7.3.1	The Chinese power sector.....	115
7.3.2	Beijing's economy	115
7.3.3	Rural residential India.....	115
7.4	Effects of sustainable energy transitions.....	115
7.4.1	Effects on the Chinese power sector	115
7.3.2	Effects on Beijing's economy	116
7.3.3	Effects on rural residential India.....	117
7.5	The role of energy modelling for developing countries.....	117
7.6	Overall conclusion and recommendations	119
	English summary	121
	Nederlandse samenvatting	126
	Kurze Deutsche Zusammenfassung	132
	List of abbreviations	133
	References.....	134

1. General introduction
