## Contents

Preface vii

**PART I: A dynamic analysis of the American economy, 1902–1952**  
*by M. Morishima and M. Saito*

1. Introduction  page 3  
2. The structural model  5  
3. Short-run properties of the model  25  
4. Long-run properties of the model  47  

**PART II: Input–output analysis of the effectiveness of fiscal policies for the United Kingdom, 1954**  
*by M. Morishima and T. Nosse*

1. Introduction  73  
2. An interindustrial model with endogenous consumption  76  
3. Impact multipliers and efficient budget of the government  96  
4. Generation of income through reduction of taxes  117  

**PART III: A general equilibrium analysis of prices and outputs in Japan, 1953–1965**  
*by M. Saito*

1. Introduction  147  
2. Theoretical model  149  
3. The estimation of the model  156  
4. Comparative statics of general equilibrium  181  
5. A factor analysis of price and output changes  216  

**PART IV: An input–output analysis of disguised unemployment in Japan, 1951–1965**  
*by M. Morishima and Y. Murata*

1. Introduction  243  
2. Disguised unemployment in a re-interpreted input–output model  256  
3. Data and estimates of the parameters  270
4. Factor analysis of disguised unemployment

APPENDIX: An estimation of international trade multiplier, 1954-1965

by M. Morishima and Y. Murata

1. Introduction 303
2. A modified Metzler model 306
3. Estimation of parameters and multipliers 318
