Effects of Distribution Planning Systems on the Cost of Delivery in Unique Make-to-Order Manufacturing

Presented by

Uwe Hermann, MBA

Submitted in fulfilment on the requirements for the Degree of

Doctor of Philosophy

UNIVERSITY
of
GLASGOW

The School of Business
Department of Management
Faculty of Law, Business and Social Science
University of Glasgow
III Table of Contents

I  Abstract ........................................................................................................ III
II  Preface ........................................................................................................ IV
III  Table of Contents ....................................................................................... VII
IV  List of Figures .............................................................................................. XII
V  List of Tables ................................................................................................. XIV
VII  Acknowledgement ....................................................................................... XVII
VIII Author's Declaration ............................................................................... XVIII
IX  Definitions .................................................................................................. XIX
X  Abbreviations ............................................................................................... XXI

1  Introduction .................................................................................................... 1
   1.1 Research Overview ................................................................................. 3
   1.2 Theoretical Background ........................................................................ 6
   1.3 Practical Background ............................................................................. 9
       1.3.1 The Manufacturing Industry ....................................................... 10
       1.3.2 The Consumer Market .............................................................. 10
       1.3.3 The Retail Market ..................................................................... 13
       1.3.4 Delivery and Transportation ..................................................... 16
       1.3.5 Operational Utilisation Structures of DPS in UMTO .............. 19
   1.4 Importance and Attractiveness ............................................................. 22

2  Research Question ........................................................................................ 23
   2.1 Definition of the Research Question ................................................... 23
   2.2 Definition of UMTO Delivery with Time Windows ......................... 25
   2.3 Narrowing the Focus of the Research Problem .................................. 27
   2.4 Generalisability of the Research Question ......................................... 30
   2.5 Importance of the Cost Problem in Distribution for UMTO .......... 32
2.6 Reflections on the Formulated Cost Problem .................................. 35
2.7 Cost of Delivery for UMTO ................................................................. 36
  2.7.1 Identifying Cost Parameters ....................................................... 36
  2.7.2 Delivery Cost as a Share in Total Cost ....................................... 38
2.8 Summary and Conclusions ............................................................... 41

3 Literature Review .............................................................................. 43
  3.1 Distribution Planning Approaches .................................................. 43
    3.1.1 Historical Development ............................................................. 44
    3.1.2 Tactical and Strategic Planning ................................................. 51
    3.1.3 Heuristic and meta-heuristic Models ........................................ 54
    3.1.4 Stochastic & Dynamic Simulation based Planning in DPS .......... 58
    3.1.5 Planning under Certainty and Uncertainty ............................... 61
    3.1.6 Tabu Search and Genetic Search ............................................... 62
    3.1.7 Simulated Annealing ................................................................. 64
    3.1.8 Capacitated Vehicle Routing ...................................................... 65
  3.2 TWC in Distribution Planning ....................................................... 67
    3.2.1 Classification of TWC in VRP .................................................. 69
    3.2.2 Use of complex DPS for VRPTW ............................................. 75
  3.3 Distribution Planning for UMTO ..................................................... 78
    3.3.1 SCM in Production and Distribution ........................................ 84
    3.3.2 Approaches for UMTO ............................................................ 90
    3.3.3 UMTO Distribution Planning under TWC ............................... 94
  3.4 Simulation Techniques in Logistics ............................................... 97
    3.4.1 Appraisal of existing Simulation Models ................................... 104
    3.4.2 Application of Simulation in Decision Support Models .......... 109
    3.4.3 Sensitivity Considerations ...................................................... 112
  3.5 Experimental Research ............................................................... 114
## 3.5.1 Experimental Research in Logistics

---

## 3.5.2 Risks in Experimental Design

---

## 3.5.3 Sampling and Pilot Studies in Experimental Research

---

## 3.6 Coherence between Simulation and Experimental Research

---

## 3.7 Summary and Conclusion

---

## 4 Methodology

---

### 4.1 Research Framework

---

#### 4.1.1 Mapping the Research Design

---

#### 4.1.2 Experimental Research Design

---

#### 4.1.3 Simulation in the Environment of Positivistic Research

---

#### 4.1.4 Combining Qualitative and Quantitative Research

---

#### 4.1.5 Combining Inductive and deductive Methodologies

---

#### 4.1.6 Parameters of Validity Substantiation

---

#### 4.1.7 Practical and Phenomenological Research Initiations

---

### 4.2 Definition of the Cost Function

---

#### 4.2.1 Influences on Delivery Cost

---

#### 4.2.2 Supporting Cost Parameters

---

#### 4.2.3 Cost Function and Objective Function

---

### 4.3 Choice of the Simulation Model

---

#### 4.3.1 Structural and Methodological Approach

---

#### 4.3.2 Logistics Optimisation through Simulation

---

#### 4.3.3 Summary of the applied Simulation Model

---

### 4.4 Sampling and Data Input Configurations

---

#### 4.4.1 Data Sampling

---

### 4.5 Analysis

---

#### 4.5.1 Application of Descriptive Statistics

---

#### 4.5.2 Other Multivariate Analyses

---
