General Introduction

1. Chapter 1: Theoretical framework

1.1. Introduction

1.2. Retirement in the absence of a pension system
   1.2.1. Flexible labour supply
   1.2.2. Fixed labour supply
   1.2.3. Fixed labour supply and uncertain lifetime
   1.2.4. Fixed labour supply and time preference rate
   1.2.5. Fixed labour supply and variable wage rate
   1.2.6. Fixed labour supply and liquidity constraint

1.3. Retirement in the presence of a pension system
   1.3.1. Actuarial fairness
   1.3.2. The pension system and a liquidity constraint
   1.3.3. The pension system and the earnings test

1.4. Concluding remarks

1.5. Appendix I: The sign of the determinant of the matrix of the endogenous variables

1.6. Appendix II: The sign of the determinant of the matrix of the endogenous variables

1.7. Bibliography

2. Chapter 2: Implications of pension reforms in Belgium: an empirical analysis

2.1. Introduction

2.2. Redistributive impact of reforming the old-age pension system in Belgium
   2.2.1. Introduction
   2.2.2. Data and sample selection
   2.2.3. Does the Belgian old-age pension system contain retirement incentives?
      2.2.3.1. Old-age retirement incentives in the status quo
      2.2.3.2. Old-age retirement incentives in the reformed pension system
   2.2.4. Impact of a reform of the old-age pension system
      2.2.4.1. The model
      2.2.4.2. Estimation results
      2.2.4.3. Predicted retirement age
      2.2.4.4. Budgetary impact
      2.2.4.5. Redistributive impact on the income distribution of the retired
   2.2.5. Concluding remarks

2.3. Does the dismantlement of early retirement schemes increase unemployment in Belgium?
2.3.1. Introduction
2.3.2. Data and sample selection
2.3.3. Financial incentives to retire in Belgium
2.3.4. Modelling different retirement pathways
   2.3.4.1. Overview of the literature
   2.3.4.2. The model
   2.3.4.3. Estimation results
   2.3.4.4. Simulating responses to a cut in early retirement benefits
   2.3.4.5. Who is expected to move into unemployment and who into old-age retirement?
2.3.5. Concluding remarks

2.4. Appendix I: Institutional background
   2.4.1. Old-age pension system for private sector employees
   2.4.2. Early retirement schemes
   2.4.3. Unemployment benefits for elderly

2.5. Appendix II: Sensitivity analysis on the impact of variable age on retirement incentives

2.6. Appendix III: Alternative distributions for the occupational wealth equation

2.7. Appendix IV: Discrete-time competing risk model with age dummies

2.8. Bibliography

3. Chapter 3: Poverty among Belgian elderly in the transition from work to retirement: an empirical analysis

3.1. Introduction

3.2. Data construction

3.3. Descriptive analysis of the dynamics of poverty

3.4. A multiple-spell discrete-time hazard model of poverty dynamics
   3.4.1. Previous modelling research on poverty dynamics
      3.4.1.1. Components of variance models
      3.4.1.2. Hazard models and transition probability models
      3.4.1.3. Dynamic unobserved models
      3.4.1.4. Markovian transition models
      3.4.1.5. Structural models
   3.4.2. The model
   3.4.3. Results

3.5. Concluding remarks

3.6. Appendix I: Longitudinal administrative data merged with survey data: a complementary tool to analyse poverty among Belgian elderly?
   3.6.1. Introduction
3.6.2. Poverty measures

3.6.3. Descriptive analysis of the cross-sectional dimension of poverty

3.6.3.1. Decomposition by year
3.6.3.2. Pre tax/transfer and post tax/transfer poverty
3.6.3.3. Decomposition by age
3.6.3.4. Decomposition by labour market status
3.6.3.5. Decomposition by marital status
3.6.3.6. Decomposition by education level
3.6.3.7. Decomposition by health status
3.6.3.8. Decomposition by socio-economic status
3.6.3.9. Who are the people in the National Register that do not declare income?

3.6.4. Concluding remarks

3.7. Appendix II: Comparison of administrative and PSBH-survey data

3.8. Appendix III: Sensitivity of the results to age groups above and below 65 years old

3.9. Appendix IV: Sensitivity of the results to distribution of random error terms: extreme value instead of logistic distribution

3.10. Appendix V: Sensitivity of the results to the inclusion of the self-employed

3.11. Bibliography

**General Conclusion**
