The Macroeconomic Theory of Exchange Rate Crises

GIOVANNI PIERSANTI
## Contents

List of Figures and Table xi

Introduction 1

### Part I The Monetary Model under Flexible Exchange Rates

1. The Basic Monetary Model of the Exchange Rate 7
   - Introduction 7
   1.1 The Structure of the Model 7
   1.2 Competitive Equilibrium and Dynamics 15
   1.3 The Equilibrium Path for the Nominal Exchange Rate and Real Money Balances 18
   1.4 Permanent and Temporary Changes in the Exogenous Variables and Exchange Rate Dynamics 22
   1.5 The Optimal Rate of Monetary Growth and of Exchange Rate Depreciation 27
   1.6 Summary 32

### Part II Fixed Exchange Rate Regimes and Currency Crises

2. Crises and Policy Imbalances 35
   - Introduction 35
   - Speculative Attacks on Asset Price Fixing Policies 36
   - The Krugman-Flood-Garber Model 42
   - Extensions 53
     - 2.3.1 Sterilization, Interest Rate Defense, and Asset Substitutability 54
     - 2.3.2 Alternative Post-Collapse Scenario 60
     - 2.3.3 Capital Controls and Borrowing Constraints 63
     - 2.3.4 Real Variables Movements 68
     - 2.3.5 The Banking Sector and the Timing of Speculative Attacks 71
     - 2.3.6 Banking and Currency Crises 73
     - 2.3.7 The Timing of the Attack under Uncertainty 82
     - 2.3.8 Speculative Attacks on Exchange Rate Target Zones 87
   - 2.4 Summary 98

3. Crises and Self-Fulfilling Expectations 100
   - Introduction 100
   - A Standard Open Economy Macromodel for Policy Evaluation 101
     - 3.1.1 Rules vs. Discretion 104
     - 3.1.2 Alternative Equilibrium Solution to the Inflation Bias 108
# Contents

3.2 Fixed Exchange Rate Regimes with Escape Clause 116
   3.2.1 The Basic "Early" Escape Clause Model 116
   3.2.2 The Basic "Late" Escape Clause Model 123

3.3 Extensions 129
   3.3.1 The Stock of Debt and Self-Fulfilling Crises 129
   3.3.2 Optimal Interest Rate Defense Policy and Credibility 136
   3.3.3 Reputation, Credibility, and Self-Fulfilling Speculation 140
   3.3.4 Self-Fulfilling Speculative Attacks and Contagion 144
   3.3.5 Financial Intermediation and Liquidity Crises 163
   3.3.6 Bank Runs and Exchange Rate Sustainability 170
   3.3.7 Credit Constraints, Balance Sheets, and Financial Crises 172
   3.3.8 Uniqueness Versus Multiplicity of Equilibria in Models of Self-Fulfilling Beliefs: The Global Game Approach 179

3.4 Summary 195

4. Dynamics of Crises 197
   Introduction 197
   4.1 The Boom–Recession Cycle of Exchange Rate Based Disinflation Policies 198
      4.1.1 The Real Exchange Rate 205
   4.2 Expected Future Policy Changes and Currency Attacks 211
   4.3 Asset Price Dynamics and Financial Crashes 219
      4.3.1 Equilibrium Conditions 225
      4.3.2 Asset Price Decline and Twin Crises 227
   4.4 Sudden Stops and Growth Collapse 235
   4.5 Consistent Macroeconomic Policies and Exchange Rate Crises 241
   4.6 Policy Choices, Devaluation Size, and Timing of Attacks 251
      4.6.1 Speculation and Exit Strategies 251
      4.6.2 Devaluation Size and Timing of Attack 264
      4.6.3 Learning, Multiplicity, and Equilibrium Dynamics in a Dynamic Global Game of Currency Attacks 270
   4.7 Summary 281

5. Epilogue 283
   5.1 Asset Price Bubbles 283
   5.2 Exchange Rate Regimes with Global Capital Markets 285

Mathematical Appendix 290
   Introduction 290
   A.1 Basic Properties of Ordinary Differential Equations 290
   A.2 Basic Properties of Ordinary Difference Equations 307
   A.3 Nonlinear Dynamics, Bifurcation, and Chaos 320
   A.4 Dynamic Optimization 329
   A.5 Stochastic Equations 340
