Preface and acknowledgements ix

1. Introduction: The Finnish model of innovation and welfare 1
   1.1 National models confront the contradiction between global competition and the maintenance of welfare 1
   1.2 From innovation system to an enabling welfare state 5
   1.3 An overview of the book 11
2. Institutional rhetoric between research and policy making 14
   2.1 Rhetoric in science, technology, and innovation policy 14
   2.2 Making sense of concepts that transcend the boundaries between science and policy making 18
   2.3 Statistics, indicators, and policy document writing practices 22
   2.4 OECD task forces as international fabrics of technology policy language 24
   2.5 Rhetorical features of the OECD NIS policy documents 27
3. NIS in innovation and technology policy research 33
   3.1 Two sources of NIS: An understanding of the institutional conditions of a technology gap and the idea of interactive learning 33
   3.2 An optimistic view: Defining the determinants of a national innovation system 39
   3.3 Comparing national systems for learning 43
   3.4 Further theorizing of the NIS approach in research and policy making 46
4. The adoption of NIS in the Finnish science and technology policy of the 1990s 52
   4.1 The emergence of NIS in the reviews of the Science and Technology Policy Council of Finland 52
   4.2 Changes in the definitions and sources of legitimation of the NIS concept in the Council reviews 56

4.3 The arguments of the 1993 Review "Toward an innovative society" 59
4.4 A vehicle for national consensus: The development of the national innovation system as "an offer one cannot refuse" 63
4.5 The development of the 2000s: From social innovation to broad-based innovation strategy and centres of excellence 67

5. Policy discourse and the reality of national innovation 72
5.1 Did the NIS policy contribute to the rise of the Finnish ICT industry in the 1990s? 75
5.2 Redistribution of power and democracy in the age of innovation policy 81
5.3 The epistemology of transdiscursive terms 89
5.4 From policy discourse to practice: Performativity through instruments and multi-voiced expertise 96

6. Institutional change and learning: The case of Finnish basic education 102
6.1 Production of capabilities and innovativeness 102
6.2 Explanations for the success of Finnish students in PISA tests 106
6.3 How to study institutional change and learning 112
6.4 The emergence of the Finnish comprehensive school and the challenge of student diversity 116
6.5 The crisis of the streaming system and the development of the part-time special education system 121
6.6 Constructing the foundations of professional expertise: The development of diagnostic tools, remedial materials, and pedagogical solutions 125
6.7 The change in the governance of school: From a culture of control to a culture of trust 131
6.8 The multiorganizational field of special education and the forms of interactive learning 135
6.9 The nature of institutional development and the limits of emulation 139

7. Capability-cultivating services as a foundation for welfare and innovation policies 143
7.1 The welfare state as a developer of capability-cultivating services 143

7.2 The financial crisis of the welfare state and the fate of enabling services 147
7.3 Higher education policy and the nurturing of absorptive capacities 152
7.4 From investment in human capital to cultivation of human creativity 154
7.5 Individual capabilities: From cognitive skills to the development of the self 159
7.6 Education and capability-cultivating services as a foundation for innovation policy 166

8. An enabling welfare state, collective learning, and democracy 171
8.1 An enabling welfare state: The next stage of the Nordic welfare state? 172
8.2 State, associations, and institutional learning 177
8.3 Forms of governance: From competition and control to experimentation and learning 181
8.4 Innovation and democracy: Mobilization of human capabilities 186
8.5 Transcending the national view: Learning networks across national boundaries 190

9. Conclusions: Politics for the cultivation and mobilization of human capabilities 194
