**The economic potential of age-specific
assistive systems**

A theoretical and empirical approach

D 83 (Diss. TU Berlin)

Shaker Verlag
Aachen 2014

List of contents

List of contents	5
1 Introduction	9
1.1 Motivation and research question.....	9
1.2 Problem statement and aim of the dissertation	11
1.3 Structure of the dissertation	12
2 Starting point: Driving forces for the economic potential of assistive systems	13
2.1 Global trends challenging social and healthcare systems.....	13
2.2 Some empirical data on global trends	14
2.2.1 Demographic trends and their budgetary implications - a European perspective.....	14
2.2.2 Paying particular attention to long-term care needs in the EU	19
2.2.3 Age-related diseases and healthcare costs - empirical evidence from Germany	24
2.3 Preliminary conclusion	31
3 Theoretic foundations: Definition of terms as a qualitative prerequisite for quantitative work on assistive systems	34
3.1 Assistive technology devices and assistive services	34
3.2 "Ambient Assisted Living" and Ambient Intelligence.....	37
3.3 The supply of assistive systems	43
3.3.1 Goods and markets	43
3.3.2 Home automation: support for daily routines in private households.....	49
3.3.3 Home safety and security	50
3.3.4 Communication, entertainment and social networking.....	52
3.3.5 Health and care	54
3.3.6 Assistive Services.....	58
3.4 Target groups for assistive systems	63
3.5 Multidimensional aspects of ageing and the needs of the leading target group.....	65
3.6 Preliminary conclusion	69

4	Towards a working definition of assistive systems and their economic potential.....	75
4.1	Understanding the concept of environment	75
4.2	Selected empirical evidence for the impact of environments on healthy and successful ageing.....	80
4.3	Preliminary conclusion I: Assistive systems in the environment of ageing persons.....	86
4.4	Preliminary conclusion II: Working definition of assistive systems	90
4.5	Preliminary conclusion III: Working definition of the economic potential	92
5	Related empirical work on the economic potential of assistive systems	98
5.1	The economic potential of the health economy	98
5.2	From the economic potential of the health economy to the economic potential of assistive systems	104
5.3	Empirical estimations of the economic potential of assistive systems.....	110
5.3.1	The number of potential consumers	110
5.3.2	The willingness to accept and to use assistive systems	113
5.3.2.1	Evidence from Germany.....	113
5.3.2.2	Evidence from the EU.....	119
5.3.2.3	Evidence from the USA	123
5.3.2.4	Evaluation of the presented empirical work.....	126
5.3.3	The willingness to pay for assistive systems	128
5.3.4	The volume of involved industrial branches and submarkets.....	133
5.3.5	The market for assistive systems	137
5.4	Preliminary conclusion	145
6	A methodological framework to calculate the economic potential of assistive systems.....	148
6.1	Background	148
6.2	The theoretical model	148
6.2.1	Setting the scene	148
6.2.2	Computing the costs of assistive systems.....	152
6.2.3	Computing the fictitious sales potential of assistive systems	154

6.3	Empirical results	157
6.3.1	Basic Scenario	157
6.3.2	Scenario variant I: Market penetration and consumers' attitude	164
6.3.3	Scenario variant II: Consumers' needs concerning health and care	167
6.3.4	Scenario variant III: Composition of submarkets, goods and target groups	171
6.4	Summary of the applied scenario based approach	176
7	Synopsis and evaluation of achievements	181
7.1	Summary of findings	181
7.2	Discussion of the empirical results	190
8	Perspective	200
9	Appendix	203
9.1	List of abbreviations	203
9.2	List of symbols	207
9.3	List of figures	208
9.4	List of tables	209
9.5	References	212
