<i>List of Figures</i>	xiii
Introduction: The Index Number Problem	1
<b>I The Index Number Problem</b>	
I The New Formula	5
1 The Price Index	5
2 Data	7
3 Chain Consistency	8
4 The New Formula	9
II The Power Algorithm	16
1 Power Test	16
2 Utility-Cost	17
3 Laspeyres and Paasche	21
4 True Index	22
III Combinatorics	25
1 Minimal Chains	25
2 System and Derived System	27
3 Triangle Inequality	29
4 Extension and Exhaustion Properties	32
IV Consistency	34
1 Consistency	34
2 Utility Model	38
3 Solution Structure	44
4 Principal Solutions	48
5 Inconsistency and Approximation	51
6 Old and New: An Illustration	58
7 Final	62
V Illustration	64
1 Review of Method	64
2 Illustration: Three References	66
<i>Bibliography</i>	69

## II Construction Theorems

1 The System of Inequalities $a_{rs} > x_s - x_r$	79
2 Principles of Choice and Preference	91
3 Utility Construction—Revisited	115
4 The Construction of Separable Utility Functions from Expenditure Data	133
5 The Connection Between Demand and Utility	148
6 Revealed Preference Revealed	178
Appendix: Terminology	207
Appendix 1 Constant Returns, Conical, Homogeneous	207
Appendix 2 Notation	208
Appendix 3 Cost Efficient, Cost Effective	210
Appendix 4 Part, Chapter, Section	214
<i>Note: RES 2011 Conference Preliminary to 'Afriat's Theorem and the Index Number Problem'</i>	215
<i>Index</i>	217
