Figures

O.1	Planned Expansion of Hydropower and Irrigation Capacity	2
O.2	Climate Change Projections across Africa's River Basins	3
O.3	Changes in Physical Performance of Hydropower and Irrigation under Climate Change in the Congo, Orange, and Zambezi Basins, 2015–50	4
O.4	Changes in Hydropower Revenues from Climate Change, 2015–50	5
O.5	Changes in Irrigation Revenues from Climate Change, 2015–50	6
O.6	Change in Cumulative Consumer Expenditure on Electricity Relative to the Reference Case	8
O.7	Cumulative Expenditure on Agricultural Imports	9

O.8	Gains from Perfect Foresight Adaptation in Hydropower	10
O.9	Damage from Not Adapting or Misadapting Hydropower Expansion Plans	11
O.10	Reducing Regrets through Robust Adaptation	13
O.11	Incremental Cost of Robust Adaptation in Hydropower	14
BO.2.1	Estimates of Regret for Different Adaptation Strategies in the Zambezi Basin	16
O.12	Sensitivity to Climate Change of Case Study Projects	18
O.13	Reducing Regrets through Adaptation in Case Study Projects	19
2.1	Schematic of Model Interactions to Estimate the Cost of Climate Change to Infrastructure	44
2.2	Two-Stage Optimization Scheme	48
2.3	Schematic of the Perfect Foresight Adaptation Optimization Tool	49
3.1	Illustration of Model Variation for Temperature and Precipitation Futures, Volta Basin	64
3.2	Comparison of Aridity for the Study River Basins	66
3.3	Climate Futures in 2050 for the Congo, Orange, and Zambezi Basins	68
3.4	Climate Futures in 2050 for the Niger, Senegal, and Volta Basins	70
3.5	Climate Futures in 2050 for the Nile Basin	72
3.6	Representative Climate Futures for West African Basins	73
3.7	Representative Climate Futures for Southern African Basins	74
3.8	Representative Climate Futures for the Nile Basin	75
5.1	Infrastructure Performance under Climate Change for SAPP Basins: Existing and Planned Infrastructure, 2015–50	86
5.2	Infrastructure Performance under Climate Change for WAPP Basins: Existing and Planned Infrastructure, 2015–50	87
5.3	Infrastructure Performance under Climate Change for the Nile Basin: Existing and Planned Infrastructure, 2015–50	87
5.4	Economic Impacts of Climate Change for SAPP Basins, Absent Adaptation	88
B5.1.1	Economic Impacts of Climate Change for Current Investments in SAPP Basins, Absent Adaptation	90
5.5	Economic Impacts of Climate Change for WAPP Basins, Absent Adaptation	91

5.6	Economic Implications of Climate Change for the Nile Basin, Absent Adaptation	92
5.7	Economic Impacts of Climate Change for All Basins, New Infrastructure, Absent Adaptation, in Present Value, with 3 Percent Discount Rate, 2015–50	93
5.8	Economic Impacts of Climate Change for All Basins, New Hydropower Infrastructure, Absent Adaptation, in Present Value, with 3 Percent Discount Rate, 2015–50	94
5.9	Economic Impacts of Climate Change for All Basins, New Irrigation Infrastructure, Absent Adaptation, in Present Value, with 3 Percent Discount Rate, 2015–50	95
5.10	Relative Vulnerability of Consumer Expenditures on Electricity to Climate Extremes, 2015–50	98
5.11	Cost of Electric Power and Fuel Mix for SAPP, 2010–50	99
5.12	Projected Fuel Mix for Mozambique under Climate Change, 2010–50	100
6.1	Flow of Perfect Foresight and Robust Adaptation Analyses	104
6.2	Gains from Perfect Foresight Adaptations: Hydropower	105
6.3	Estimates of the Economic Value of Investing in Climate Change Adaptation, for the Zambezi and Volta Basins: Hydropower Only	108
6.4	Estimates of the Economic Value of Investing in Climate Change Adaptation for the Zambezi and Volta Basins: New PIDA+ Irrigation Facilities	110
6.5	Damage from Not Adapting or Misadapting Hydropower Expansion Plans	112
6.6	Regret of PIDA+ and Perfect Foresight Adaptations across the Range of Climate Futures for the Zambezi and Volta Basins	113
6.7	Benefits of Robust Adaptation Compared with PIDA+ in Each Basin: Hydropower Only	118
6.8	Benefits of Robust Adaptation Compared with PIDA+ in Each Basin: Irrigation Only	119
6.9	Changes in Baseline Investments under Robust Adaptation	120
6.10	Cost of Robust Adaptation for Hydropower	122
6.11	Effects of Robust Adaptation on Consumer Energy Expenditures	125
6.12	Total Electricity Exports vs. Hydropower Generation, SAPP	126
6.13	Cost of Electricity Comparison: Base, Dry, and Wet Scenarios	127

6.14	Perfect Foresight Adaptation Strategies in Volta Basin Compared with PIDA+	128
7.1	Annual Cycle of Precipitation for Each Test Project Based on the Historical Record	136
7.2	Range of Historical and Annual Projected Precipitation Changes by 2050 for the Five Watersheds, from 121 Climate Projections from the Global Climate Models	137
7.3	Hydrology and Evaporation Effects on Hydropower Production from the Pwalugu Multipurpose Project across Climate Projections	141
7.4	Mean Batoka Gorge Annual Hydropower Generation versus Mean Annual River Flow across 121 Climate Projections and Historical Climate	142
7.5	Safe Yield for Mwache Dam across 121 Climate Projections	142
7.6	Summary of Vulnerability of Projects across Climates, before Design Adaptation	143
7.7	Lower Fufu Project: Average Hydropower Generation, Levelized Cost, and Levelized Cost Regret across Design Alternatives and Climate Projections	144
7.8	Potential Economic Benefits That Derive from Adapting Project Design	145
7.9	Low-Regret Designs for Each Climate Projection for the Lower Fufu Project	147
7.10	Potential for Robust Adaptation to Reduce Regrets	148
7.11	Typology of Project Vulnerability and Adaptation Benefits	150

Maps

O.1	Location of Case Study Projects	17
1.1	Summary of PIDA Energy Infrastructure Development Proposals and Priorities	29
1.2	Selected River Basins and Power Pools in Africa	31
7.1	Test Project Locations	133

Tables

O.1	Costs and Benefits of Robust Adaptation	14
2.1	Framework for Evaluating the Impacts of Climate Change on the Energy Sector	39

2.2	Adaptation Levers in the Perfect Foresight Modeling	47
4.1	References for Irrigation Information at the African Continent Scale	79
4.2	Summary of Existing and Planned Hydropower and Irrigation Capacity in PIDA+	80
4.3	Estimated Present Value of Revenues for PIDA+ Infrastructure Expansion, 2015–50	80
4.4	Estimated Present Value of Investment Costs for PIDA+ Infrastructure Expansion, 2015–50	81
B4.1.1	Summary of Assumptions	82
5.1	Present Value of Revenues of Planned Hydropower and Irrigation Expansion, 2015–50	96
5.2	Present Value of Consumer Expenditure on Electricity, 2015–50	97
5.3	Present Value of Agricultural Import Needs, 2015–50	101
6.1	NPV of Investment in Hydropower and Irrigation Expansion, without and with Perfect Foresight Adaptation, 2015–50	106
6.2	Robust Strategies for Each Basin and Their Performance Compared with PIDA+	116
6.3	Costs and Benefits of Robust Adaptation	124
6.4	Present Value of Consumer Expenditure on Electricity, without and with Robust Adaptation, 2015–50	126
7.1	Key Features of the Test Project Analyses	139
7.2	Robustness Criteria Used in the Case Studies	146
