

# maths for economics

Geoff Renshaw

with contributions from Norman Ireland

Fourth Edition

**OXFORD**  
UNIVERSITY PRESS

# Contents

Detailed contents	viii
About the author	xii
About the contributor	xii
About the book	xiii
How to use the book	xv
Chapter map: <i>alternative routes through the book</i>	xvi
Guided tour of the textbook features	xviii
Guided tour of the Online Resource Centre	xx
Guided tour of Dashboard	xxii
Acknowledgements	xxiv

## PART ONE Foundations

1 Arithmetic	3
2 Algebra	48
3 Linear equations	70
4 Quadratic equations	122
5 Some further equations and techniques	152

## PART TWO Optimization with one independent variable

6 Derivatives and differentiation	187
7 Derivatives in action	208
8 Economic applications of functions and derivatives	239
9 Elasticity	284

## PART THREE Mathematics of finance and growth

10 Compound growth and present discounted value	321
11 The exponential function and logarithms	355
12 Continuous growth and the natural exponential functions	370
13 Derivatives of exponential and logarithmic functions and their applications	398

## PART FOUR Optimization with two or more independent variables

14 Functions of two or more independent variables	421
15 Maximum and minimum values, the total differential, and applications	475
16 Constrained maximum and minimum values	517
17 Returns to scale and homogeneous functions; partial elasticities; growth accounting; logarithmic scales	558

**PART FIVE Some further topics**

18	Integration	591
19	Matrix algebra	618
20	Difference and differential equations	642
W21	Extensions and future directions (on the Online Resource Centre)	
Answers to progress exercises		669
Answers to Chapter 1 self-test		701
Glossary		702
Index		711
