

ESSAYS ON TREATMENT EFFECT ESTIMATION

DOMINIK REHSE

CONTENTS

1	INTRODUCTION	1
1.1	Motivation	1
1.2	Goal and outline of dissertation	2
2	TREATMENT EFFECT ESTIMATION	5
2.1	Introduction	5
2.2	The potential outcomes framework	5
2.3	Common treatment effect estimands	6
2.4	Selection on observables	6
2.4.1	Assumptions of unconfoundedness and overlap	7
2.4.2	Treatment effect estimation under unconfoundedness and overlap	8
2.5	Selection on unobservables	10
3	THE EFFECTS OF UNCERTAINTY ON MARKET LIQUIDITY: EVIDENCE FROM HURRICANE SANDY	11
3.1	Introduction	11
3.2	Tested theoretical implications	14
3.3	Identification strategy	15
3.3.1	Setting of natural experiment	17
3.3.2	Description of dataset	21
3.3.3	Specification of treatment intensity	23
3.3.4	Model specification	28
3.3.5	Separation of risk and uncertainty	30
3.4	Results	32
3.5	Robustness checks	33
3.6	Conclusion	36
3.A	Appendix	38
4	TREATMENT EFFECT ESTIMATION WITH REGRESSION ADJUSTMENT UNDER PREDICTIVE POWER CONSIDERATIONS	45
4.1	Introduction	45

4.2	Measuring predictive power	47
4.2.1	Dispersion and heteroskedasticity	47
4.2.2	Predictive power and limited overlap	49
4.2.3	Assessment with conditional quantile estimation	49
4.2.4	Methods for defining the neighborhood	51
4.2.5	Methods to address misspecification risk	52
4.2.6	Quantile random forests	53
4.3	Treatment effect estimation under predictive power considerations	55
4.3.1	Simulated data	56
4.3.2	Estimating predictive power	57
4.3.3	Characterizing differences in predictive power	58
4.3.4	Treatment effect robustness check	61
4.4	Conclusion	63
4.A	Appendix	65
5	A VISUAL TEST FOR COVARIATE BALANCE	67
5.1	Introduction	67
5.2	The test procedure	68
5.2.1	Calibrating propensity score models	69
5.2.2	Generating plots for observed relationships	69
5.2.3	Generating null plots	70
5.3	An example	71
5.4	Conclusion	72
6	SUMMARY, RECOMMENDATIONS FOR FURTHER RESEARCH, AND PRACTICAL IMPLICATIONS	75
	BIBLIOGRAPHY	77
