

**Essays in applied econometrics: Analysing the interplay between crime and
the economy using the synthetic control method, spatial panel regressions and
group based trajectory modelling**

Inaugural-Dissertation
zur Erlangung des Doktorgrades
des Fachbereichs Wirtschaftswissenschaften
der Johann Wolfgang Goethe-Universität
Frankfurt am Main

vorgelegt von
Philipp Süß
aus Schwetzingen

Frankfurt, 2016

Table of contents

I Introduction

1. Abstract
2. Why three *empirical essays in crime and economics*?
3. The synthetic control method
4. Spatial panel regressions
5. Group based trajectory modelling
6. References

II The synthetic control method: Small T, small N Monte Carlo evidence and an application to the effects of privatizing probation services on revoke rates

1. Introduction
2. Synthetic control method and placebo tests
3. Monte Carlo study
 - 3.1 Data generating processes
 - 3.2 Results
4. Application to revoke rates after outsourcing probation services
 - 4.1 Results concerning the overall revoke rate
 - 4.2 Juvenile, general criminal law and crime specific results
5. Conclusion
6. References
7. Appendix

III Regional market income inequality and its impact on crime in Germany: A spatial panel data approach with local spillovers

1. Introduction
2. Descriptives
 - 2.1 Crime rates
 - 2.2 Market income inequality
 - 2.3 Control variables
3. Econometric strategy
4. Results
5. Conclusion
6. References
7. Appendix

IV Heterogeneity in local German crime trends: Endogenous clustering and associations to initial district conditions

1. Introduction
2. Data and statistical methods
 - 2.1 Data
 - 2.2 Statistical methods
3. Group based trajectories and group membership prediction with demographic and socio-economic initial conditions
 - 3.1 Total crimes
 - 3.2 Street crimes
 - 3.3 Assault
 - 3.4 Aggravated assault
 - 3.5 Domestic burglary

3.6 Property damage

3.7 Theft from motor vehicles

3.8 Drug related crimes

4. Summary of the results

5. Conclusion

6. References

7. Appendix
