New workflows and features

08/23/2023

WOLFCon 2023
Moritz Horn (VZG)
Public KBART validator

- re-use of import functionality for public use
- no login required
- compact error/warnings display
- JSON API endpoint
In strict mode, KBART validation is performed strictly according to the NISO standard. In non-strict mode, values automatically interpolated by the GOKb are also accepted (according to the validation during package upload).
Public KBART validator

- KBART validation revised and significantly more expressive
  - general errors (i.e., missing columns)
  - column statistic
  - row-based detailed view
- errors given out the line number and the erroneous value
Column Statistics - Errors

- date_last_issue_online - 1
- online_identifier - 1
- title_url - 1
- print_identifier - 1

Errors

<table>
<thead>
<tr>
<th>Column</th>
<th>Reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>date_last_issue_online</td>
<td>The end date must be after the start date.</td>
</tr>
<tr>
<td>online_identifier</td>
<td>Value '1432-0540' is not valid!</td>
</tr>
<tr>
<td>title_url</td>
<td>Value '<a href="https://www.springer/journal/216">https://www.springer/journal/216</a>' is not valid!</td>
</tr>
<tr>
<td>print_identifier</td>
<td>Value '0736-938' is not valid!</td>
</tr>
</tbody>
</table>
Improved display of review requests

- new workflow interface
- cleaning up title and identifier inconsistencies as well as duplicates more intuitively
- Meaningful instructions and hint texts
- color highlighting of important information
- streamlining of complex data manipulation
Step 1: ID check & component cleanup

Check whether there are duplicates for the reference titles. If this is the case, merge them by first selecting a reference title via 'Select merge target' and then clicking on 'Merge duplicate'. All remaining identifiers of the title to be deleted will be taken over. If there is no duplicate, check the identifiers and delete any that are incorrect. Once the cleanup is complete, you can move to the next step.
Reference Title #1

Elektrotechnik für Ingenieur:innen: Grundlagen

Status: Current

Select IDs to mark them for removal.

SELECT MERGE TARGET
Global Open Knowledgebase

Step 1: ID check & component cleanup

Step 2: Title linking

Via 'Select linking target' you can select a reference title to link to the package title to be checked. If none of the offered reference titles matches the package title, you can either use the search mask of the last tile to find the matching reference title or create a new reference title based on the data of the package title by using the corresponding button. Then select this as the target. Confirm the link via the corresponding button.

CANCEL REVIEW MARK FINISHED
Check for duplicates in the reference titles. If this is the case, merge them by first selecting a reference title via 'Select Merge Target' and then clicking on 'Merge Duplicate'. All remaining identifiers of the title to be deleted will be taken over. If there is no duplicate, check the identifiers and delete any that are incorrect.
In the package title, check if a p-ISSN has been marked as an e-ISSN or vice versa and correct it by deleting the incorrect ISSNs. You can add new identifiers by opening the detailed view of the title in a new tab by clicking on the title. Likewise, check the reference title and correct the ISSNs there. If the package title was imported via a KBART file, contact the provider and point out the incorrect ISSN.

**Categories:**
- **Finance 2019**: Springer eBooks: Business and Economics 2019 (Book, 469, ZBW, 2023-08-13)
- **Economics 2023**: Springer eBooks: Economics and Finance 2023 (Book, 284, ZBW, 2023-08-13)
Other improvements

● KBART import
  ○ optimizations for validation and import of KBART files
  ○ option for KBART updates to clean up previous imports
  ○ internal bulk import capabilities

● Added sets for package OAI-PMH export
  ○ Filtering by content type, curatory group and audience range
